

Climate Adaptation Workshop (ALC 3914) *Application Instructions and Template*

NCTC invites applications from teams seeking to incorporate climate considerations into on-the-ground natural resource management plans and/or conservation projects. Teams must be willing to prepare for and attend a two day workshop during which the climate-smart conservation framework will be used to develop climate-informed conservation goals and identify appropriate and meaningful adaptation strategies and actions.

The workshop is intended to serve as a starting point to help teams address climate change in relation to their plan/project. We are looking for proposals whose scope is manageable within the timeframe of the workshop. We anticipate that in most cases, adaptation planning will continue following the workshop.

The application should be **no more than one page** and emphasize the following information about the team plan/project. Each heading has details (if applicable) that will help the team write their proposal.

Applications for the January 2018 workshop are due **November 3, 2017**.

- Area/Project Description
 - Where is your geographic focus?
 - Does your participation at the workshop support an existing plan or program? If so, provide the name.
 - Targets: What habitat, resource, and/or species would you like to focus on during the workshop
 - Do you have goals and/or objectives for plan/project?

- Climate Change - Observed and Projected
 - What is your understanding of the observed and projected climate change impacts in your area/project?
 - What is your understanding of the vulnerability of your target resources to climate change?
 - What climate impacts are you most concerned about in your area and for your target resources?
 - Have you done any climate change or adaptation planning in your area (e.g., vulnerability assessments, scenario planning)?

- Team Composition
 - What organizations/institutions are collaborating on this effort?
 - How many team members would participate at the workshop? What skills and experience will those individuals bring to the workshop?
 - Who will serve as the coordinator(s) to organize and help prepare the team and work with the coaches during the workshop? Does the coordinator have any experience in planning for climate change?

Submit your proposal by email to:
