

Solutions for Contractors

3 Software Packages that increase Productivity

Raise Productivity with CheckMate.

CheckMate Software Packages from Dynamic Systems are designed to bring the efficiency and accuracy of barcode to the job site.

"The CheckMate barcode system has effectively helped lower our operating costs." Thomas Hortman, AAI Services

2. Time & Attendance

Record labor hours to the Job or Task. Simply scan the employee's barcoded badge and then the barcode associated with that transaction and transmit the reports to payroll.

3. Stockroom

(Inventory Control)

Contractors can now track inventory items with barcode.

Receive, locate to shelf or bin, transfer location and issue to workorder, purchase order, etc.

Do cycle counts or monthly, quarterly, annual inventory counts.

Set minimum levels for items and get a report so you never run out of stock.

1. Toolroom (Tool Tracking)

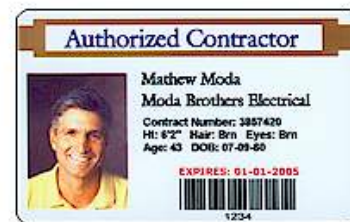

Track Who took the tool, Where it is now, and When it is due back. Transfer tools between job sites or between employees. The payback for the system is often just a few months.

Toolroom Options:

Options include the ability to track and schedule maintenance on special equipment or vehicles and to add "found" tools to the database on the fly.
