

Let Your Light Shine

Myles Guster©

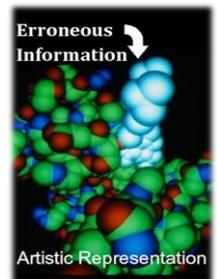

In the beginning it was said "Let there be light." In considering the body, before anatomical structure, before cellular or even molecular structure, there is light. Light as an energy form has unique signature (or soliton wave-length) specific to strength and pattern of that light signal. At the sub-molecular level are particles of light called bio-photons. The electromagnetic frequency patterns of bio-photons are found in every living organism. All cellular life, likewise then, has a unique cellular light/energy (or bio-photon) signature.

F. A. Popp, Ph.D. is a leader in the study of the bio-photonic energy. Popp monitored and was able to confirm that living cells not only emit or radiate small bursts of light, they also absorb light. His studies showed that healthy cells will store light longer than unhealthy cells. He also discovered that a healthy cell*(cells with proper resonance) radiate coherent light, while a diseased cell radiates chaotic light.

Cells communicate by converting signals (the soliton wavelength of bio-photons) into electromagnetic oscillations of resonant frequencies. Bio-chemical messengers carry these specific frequency signatures (or pass codes of information) between cellular structures that provide the specific genetic instructions behind every cellular function, not limited to but, most importantly including DNA/RNA signal messaging. Each receiving cell must receive the correct information and be able to properly recognize and utilize that information.

A state of "dis-ease" exists when the cellular light/energy signal is chaotic or NOT in resonance (canceling frequencies) creating essentially incorrect information to be transferred between cells. The receiving cell then performs its' function according to the erroneous message. The resulting function and ensuing message is passed on, now altered to a greater degree and causing even greater dysfunction at the next cellular stop. This process is multiplicative. And this cycle of altered messaging continues to the point where mass cellular structures are passing on, and functioning according to, exponentially damaged instructions. Ultimately, this progression is what produces illness.

Have you ever wondered how it is that someone that has great faith, does not smoke, does not drink and perhaps even has a very health-minded diet can end up with lung cancer, diabetes, high blood pressure and cardiac related problems or some other life threatening or debilitating condition?

It is the energetic environment in which we are operating that is the cause of disease or wellbeing. Personally, it is my heart felt belief that a closer walk with God and abiding in the things He has commanded for us to do in how we live, how we treat others and equally as important, how we treat ourselves, that is first and foremost on the road to a successful and healthy life. For the purposes of this article, I am not advocating any one religion or belief system over another. However, one could argue that when one's spiritual life (or lack thereof) is not in order we are operating in a chaotic environment.

Conversely, even for those that have a strong faith and a steady gait in their spiritual walk, on the physical plane it is our over-exposure to vast array of environmental electromagnetic interference (such as cell phones, computers, TV's and high-power lines), chemical poisoning, irradiated or processed foods and electrically dead water (not necessarily in that order) that are chief among the causes of "dis-ease."

Energy Medicine is any of a class of medicinal disciplines that deals with illness at the root cause (improper resonance or altered energy) and bringing the body back to a proper homeostasis. Homeopathy, Reiki, Acupuncture, bio-feedback and electro-magnetic therapy are just a few examples of Energy Medicine. In the past, it was Complimentary & Alternative disciplines that were most associated with Energy medicine.

However, in recent years "Mother Nature" and "High Science" have made their introductions! New discoveries and advances in study techniques have caused Energy Medicine to become a main focal point of nanotechnological research. Homeopathy in particular, seeks to bring the body back into a proper homeostasis by re-introducing the needed fractal, energy forms and restoring resonance to the affected cellular target/s. Advances in the areas of nano-technology, or nano-pharmacology as it has been related to homeopathy, even within the last few years, have brought us to a point where we can now more accurately research, develop and apply the mechanisms of Energy Medicine. As our bodies are a complex network of inter-dependant systems, one should not address wellness in one area of the body, without looking at the rest of the body as a "Whole" working structure. To that end, no matter what condition one may be contending with, a qualified and reputable Alternative & Complimentary Health Practitioner specializing in Energy Modalities can be your first step to success in achieving a true state of health and wellness.

It is, because there is a direct and distinct relationship between our physical bodies, our physical world and the energetic arena wherein we operate spiritually, that I have dedicated the better portion of the last twenty years to gaining a fuller understanding of those things spiritual/energetic and their relationship to that which we know is made manifest on the physical plane. All this has led to the Co-Founding of several companies whose research, product development and ultimately humanitarian outreach are centered on "Letting Our Lights Shine." If you have garnered anything helpful from this little diatribe, then my efforts have been rewarded and I thank you for taking the time to read.

Blessings,

Myles
