

2013, May 3

## Friday Night Hard News Call

### TO LISTEN TO THIS CALL:

- GO TO BBS RADIO 2 & SCROLL DOWN THE SCHEDULE UNTIL YOU REACH FRIDAY NIGHT.
- CLICK ON "HARD NEWS ON FRIDAY" & THE INFORMATION PAGE WILL COME UP.
- UNDERNEATH THE PICTURE OF THE GALAXY AND THE LOTUS, YOU WILL SEE A BLUE BOX WITH THE WORDS **PROGRAM ARCHIVES**.
- CLICK ON THAT BOX TO GET TO THE LISTING OF PROGRAM ARCHIVES.
- YOU CAN DOWNLOAD THE PROGRAM TO YOUR OWN COMPUTER OR LISTEN DIRECTLY.

### Opening Meditation: Angelsu [DivinB953](#)

**Phone Numbers:** 530-413-9537 [line 1]  
530-763-1574 [line 2, 3]  
530-746-0341 [line 4]  
**BBS Toll Free** 888-429-5471 **Toll Free in North America**  
**Skype:** BBSradio2

### Housekeeping: Rainbird

- BBS:**
- A listener-supported radio program; we can access program archives on BBS
  - We need **\$ 775 to complete the last 2 weeks and this week.**
  - Go to BBS Radio 2; find the listing for Friday Night Hard News; find the **Paypal** button
  - **NO COST TO ACCESS THE ARCHIVES for any of the T & R PROGRAMS**
  - Any of the archives for the other programs on BBS: the money we pay to listen to someone else's archives is put towards our BBS bill!

### T & R: • RENT DUE BY MAY 9TH AT THE LATEST!

- we can eat for them too; go into unity consciousness and state your intention

- On the website: [www.2013RainbowRoundTable.ning.com](http://www.2013RainbowRoundTable.ning.com)
- There is a **Paypal** button on this site
- **Please notify them if you're sending something:** [koran999@comcast.net](mailto:koran999@comcast.net)
- Rama's mailing address for cheques, Money orders: Ram D Berkowitz  
1704 B Llano St, # 249  
Santa Fe, NM 87505
- **phone contact** is via MariettaRobert: 317-773-0061  
or by e-mail: [stargatemarietta@gmail.com](mailto:stargatemarietta@gmail.com)
- **Remember you can have a session with Mother, as well!**

- Also need to remember that MariettaRobert's show needs to be supported as well!!!!

**T:** someone called once and said they only had \$5 - didn't think it mattered!

**OF COURSE IT MATTERS** - every little bit matters!

- For those who do not like paying electronically, here is the **mailing address of BBS:**  
**BBS Network, Inc.**  
**5167 Toyon Lane**  
**Paradise, CA 95969**

## Hard News:

T: Stephen Greer made a wonderful presentation today: will play that part tonight!

### Citizens' Conference on Disclosure

Committee: Congressman Roscoe Bartlett [Rep MD]  
Congressman Merrill Cook [Rep UT]  
Congresswoman Darlene Hooley [Dem, OR]  
Senator Mike Gravel [Dem/Lib, AK]  
Congresswoman Lynn Woolsey [Dem, CA]  
Congresswoman Carolyn Kilpatrick [Dem, MI] - Chair

- All of the congress members said they leave this week, **no longer skeptical!**
- Rana Mu told Rama that this is changing the timelines right now;
  - not waiting for the UN to get their stuff together; it is the people of the earth who are doing it
- Lynn Woolsey, Mike Gravel and others - come Monday there may be more of a discussion about this and more and more main stream news stations are playing segments of it
  - Chris Hayes put on a blurb today;
  - An AZ news station put on 10 minutes: a session in which George Filer let cats out of the bag
- what is unravelling right now - heroes and prophets showing up right now

**Ed Schultz:** he played the recording of what he did at the Barrymore Theatre in Wisconsin: stuff about sequester, the Boston bombings which have to do with Black Ops

- John Nichols: what the Republicans are doing is opposing Obama no matter what O does

**Rana Mu:** things are changing right in the moment that have everything to do with the Other: those from across the galaxy, 20 million light years away!

- How far across the entire universe is it to travel: It takes 20 BILLION light years across the entire Universe of Nebadon - Mother said it is 400 light years to get to the Pleiades;

**R:** there is more to this that has not been told

- ABOUT AN 8 HOUR CRUISE IN A STAR SHIP AT WARP 7 AND through WORMHOLES!

**Major George Filer:** the ones from the stars know how to travel at the speed of THOUGHT - INSTANT!  
Pretty much bi-locating

- This was shown on **Star Trek: next generation** and on **Voyager** where they got catapulted 70 thousand light years from earth by Q & they had to figure out how to get back
- **Star Trek: next generation - the best and clearest** [with Patrick Stewart]
- Filer: getting **notice of 1,000 sightings A WEEK**; sends out 17,000 e-mails a week! **[JUST ONE MAN]**
- There were questions about sound: they saw footage of a fully decloaked craft - it was clearly large and it was meandering in a circle and suddenly it took off - if you blinked, you missed it
- The retired members of Congress are well educated: one asked if it didn't destroy the physical body?
- Dr Wood said **no**: it has to do with the inertial space around the ship
  - there are small distinct sounds that come when they make a reversal in their path: has to do with oncoming gravity - there is no wind that would make this sound
  - have discovered a planet that is 100X larger than earth
  - **the universe goes on forever**
  - there are 2 planets are at least 1000 years older than we are; they are so developed in that 1000 years that they are able to locate where craft come from

**Geo Filer:** all over the world there are pyramids and hills; craft hover over them and get re-powered; there are over 200 flat topped pyramids in China & they are over 1000 years old, each of them - they are power stations

- Rama went on Zoltec's ship, the Phoenix; they went to Guatemala to Techao; they went over a particular one pyramid: Hoagland went up the stairs of this same one and stood by the entrance and got energy off it that turned his Geiger counter round and round - like being in a portal - which he was. When you go in a doorway and turn on the switch, there is a lime green beam that comes out of the flat top of the pyramid that goes up to the ship and powers it. After they powered up, they landed and Zoltec showed Rama where the switch was!

- Wm Shatner tweeted Rama and said he had been waiting for 40 years to hear Gravel say this!
- Begins with Hellyer from Canada speaking: saying what he says [amnesty] because there is not other way to get a loosening of the controls - T & R do not agree with this

**Audio: Senator Michael Gravel** - the first of the closing statements:

- thanked Steve for all he has done and the staff who work with him & the others: so gracious!
- If he has sounded angry, he apologizes but **he is angry**, very angry: he loves his country but he criticizes it - he is a citizen of the planet first, and American 2<sup>nd</sup> - those are his priorities
- Those of us who have held office were there when things started to go down: those who say they want to take their country back - **we have never had it!**
- The constitution passed in 1787 and 1789, we were putting in slavery for ever!
  - Also the forebearers said the people should have the right to change their gov't and create human beings as equal
- Yet, in Philadelphia, 12 years later, only white males were considered the only equal ones: if they had enough property!
  - people can rip the Constitution apart: when you talk of the constitution from the Civil War on, we had 90 years where 12-13 states who did not support the Constitution and no one did anything about it - the political parties were part of the conspiracy
- Today, the scientific advancement has been great, yet we are stuck in a system of governance that is 250 years old that is irrelevant to dealing with problems we face today.
- Going to Congress does not help: it does not have the power people it has
  - we have to come to the point of being humble and looking at what is going on: maybe the structure of Gov't is deficient: **we have representative gov't not a democracy where the majority of people give their power away to a small minority**
- \$4 billion spent on last election on that small minority: congress, admin, judiciary etc - all owned by the Wall Street, military industrial complex and all special interest groups
- NATO: we are seeing the globalization of the military industrial complex
- 60 % of the world's wealth is owned by 1,300 corporations with inter-locking directorates & family ties
  
- The Illuminati, Bilderbergs etc have power and are clever enough to keep it and get more
- Our task is to look at the structure of why are we failing as human beings? - all of us - We have heard of the military who are brave and will charge up a hit, yet the military defers to authority that silences them and it makes no sense to keep such secrets
- The whole congress had bought into the secrecy of those paper [the Pentagon Papers]; they could only go and read them and not take notes! He brought them out and made the Supreme Court move and put them to shame, including the newspapers

[T: Mike Mansfield stepped up in front of Gerald Ford and prevented Gravel from being impeached: the whole Congress had bought into the secrecy of these documents, and Gravel put them forward for people to see - he **released The Pentagon Papers**. Gravel was going to be impeached: saved by Mansfield.]

- Representative gov't was designed to keep the citizens in adolescent civic behaviour: I want that, but I don't want to pay any taxes. This is adolescent behaviour! This structure of gov't does not do anything about bringing citizens into adulthood so you guarantee that the people will remain adolescent: you bring the people to civic adulthood by giving them more and more responsibility
- there are only two venues for change: the government and the people: the gov't won't change and the people can't because they give their power away
- Marcus Cicero defined freedom as participation in power and there won't be any change until the people are empowered. The central power of all governments is the ability to make laws that stand outside us and we are supposed to obey them; at the moment; only reps make laws and they are, de facto, controlled by Wall St and the other entities that control our society - the answer is to empower people to make laws therefore they will have the power to do away with the secrecy of gov't - does it surprise you that 50% of the people don't care about government?
- Nothing really happens to advance the needs of the human race [in the gov't in US and Britain]: the answer is not with the elites: the elite manipulate the constituencies; those in the parties only want voters who are of their parties, of their thinking, not of the general population. So the whole structure of representative gov't is deficient.
- He has unreserved faith in the people and if not in the people, in the leaders? That is where we are today. We do not have the maturity to meet the extra terrestrials. Yes, we have the scientific ability to send ET home and there is a lot out there that could help the human race, but we can't get our hands on it because the structure of government does not allow this kind of revelation.
- Go to: **www. National Citizens Initiative for Democracy**.  
[when he said he would not see it in his life time, Tara said YES HE WILL!]

T: it blew her mind that a single member of Congress had the ability to say what he said!

And others said it along the way that this [information] gives me hope when I didn't have any!

R: what Rana Mu said - changing the timelines: many came in expecting little; and this changes it all

T: Geo Filer said much of the laws of physics are wrong - **on purpose**

- We have the technology to send ET home - a CEO of Lockheed Martin told 100+ engineers
- Geo said it is criminal that they have kept the lid on the technology - we are 2 decades into this century and we have not lifted our fingers to help the earth  
Many at the conference said we have to get underway by 2020 or it is too late!
- Col. French [USAF Ret]: brought up Nichola Tesla - over 2,000 patents, post WW II, were taken by the Russians and that's when they got ahead of the US & have remained ahead of the US; yet they have only gotten so far.
  - There is state of consciousness that has to exist for these technologies to be used: the technologies have their own intelligence and will not allow their energies to be used with malintent - a total cliff hanger
- Ted Kompel [?] spoke of a pilot who saw all the ET s when he was flying: spoke of how difficult it was to talk of these things: said one of the greatest ETs of all was God, and God is Mother!
  - T refers again to Mike Gravel who released the Pentagon Papers; Daniel Ellsberg came forth

first, but Gravel enabled Ellsberg's writings.

The pilot said one of the greatest Ets is God! We know that God is Mother! We are all gods, goddesses, All That Is

### Conf Call:

**Google this name: sanniceto - she was one of the ET pilots that crash landed:** there were 5 beings in the ship and 2 of them lived; she was born into a body and lives in NM

**R:** there are so many stories that have not been told: met with Congress members, heads of state, crowned heads who take their orders from the dragons that are the Annunaki

- Linda Moulton Howe: was taken to visit a live ET, one of the 5 in the craft
- Ebbe was killed eventually; he was taken to the Wright Patterson Air Force Base and they found out how to stop him from walking through walls - they found it was annoying!
- They took all the dead bodies there, plus the debris - the bodies were taken to Area 51 where they did more experiments
- There was one other who lived: spoken of in a documentary called Taken
- The ET survivors from Roswell were from the Apex planet in the Zeta Reticula constellation. Due to the nuclear warfare and what it did to their planet, they went to live underground and eventually lost their ability to reproduce
  - They have human DNA and they caused themselves to mutate due to radiation.
- A theme throughout the week: all the people who communicated with the Ets said it was done telepathically - they said to those they talked to "we are here because you are going to annihilate yourselves if you continue as you are now"
- **Geo Filer is getting 1,000 sightings A WEEK - one man!**

**Caller:** heard that the movie **Sirius** was not that great -

**T:** not so - no matter whether the craft are clear or not: the point is **THE WAY THEY MOVE!** No one on the planet, in the public, do not know they have this technology - what the dark ones want is to use the technology to weaponize themselves so they can take them over

**T:** as Mike Ravel said, people are not interested in gov't because they have lost faith!

**T:** it is not true - if you say no matter what we do, others will still do what they want, this makes you part of the problem

**Caller:** would harm come to them for speaking up?

**T:** Greer said there are federal agents who come to protect others

- Bassett was excited too - the former members of Congress and the witnesses got into deep conversations and questioning: what is the next step?
  - Mike Gravel led the way in terms of this question: can't go to Security Council because it is led by the US - go to the UN GENERAL ASSEMBLY AS IT IS NOT CONTROLLED.
- Bassett said at the end today - after Gravel spoke: consider that Barack Obama knows all about Ets

**Caller2:** she heard the end today and felt so proud of those old timers!

**T:** Congressman Bartlett: this man has driven 2.5 hours back and forth from Virginia at 87 years old

**Caller2:** it has changed!

**T:** Rana Mu - it has changed the timelines and exponentially

The next day you got more goose bumps and it went higher!

**Caller1:** will this go viral?

**Caller2:** will see a lot of YouTubes now

**T:** the Honourable Paul Hellyer, former Minister of Defence from Canada: he did a piece of his own and he got more than 10 minutes! Such a conservative guy and country - a different demeanour in the Canucks - yet together we can do a lot

**T:** yes, Edgar Mitchell spoke right at the beginning

**T:** Annie Rose was on the money on Thursday - basically that the US is going to get hard both on the 9<sup>th</sup> and the 25<sup>th</sup> - T's take on this: how will changing the timelines affect this?

- On **Journal News** today: really bad news for Europe: the European Economic Affairs Commissioner: from Bad to Worse - more record high unemployment and good luck trying to get a loan! Journal News was celebrating 60 years on the air.
- The bad news just got worse: Netherlands will join France and Spain in going over deficit spending limits [3% is what they say] Spain's unemployment - 57% of young people are jobless; Ireland, Portugal, Netherlands, Spain, Greece, Italy, Slovenia, Cyprus - Germany is going to have to declare bankruptcy [from Larry, Curly, Tom the RT Cat, Heidi]
- What was being discussed at the event: the US & Canada were an experiment in a non-German economy - see if you can do some small-d democracy that is non-german - WWII never ended - just carried on under the surface. If Germany declares bankruptcy, Angelca Merkel will have to appear in front of the World Court and declare her innocence - it will not work.

**T** was glad that Hellyer said what he said: that we might offer amnesty to them but we have to have the power to stop them - if you do nothing to stop them

**[BELOW YOU WILL FIND A LIST OF VIDEO HIGHLIGHTS FROM THE CITIZENS HEARING ON DISCLOSURE FROM DAY 1, APRIL 29, 2013 - SENT BY RAMA]**

- 1/4 million of **Somalis** died in the last - and more than half were children - they starved to death!

**T:** IT is the 13 families who did nothing: the UN controlled by the US is responsible

- **Miranmar** - all the Muslims [Rehinga] are being killed by the Buddhists!!!!

**Journal News:** the bad news just got worse: the Economic Minister said the European economy will need help from other part of the world - AND WHO WILL THAT BE??

**T:** the NWO ites - the **best line in Sirius movie: Greer said the existence of the ET is not a problem - what the problem is the question of propulsion and gravity - a \$100 trillion problem!**

**Caller1:** why was Keshe not invited to this conference?

**T:** they would kill him for sure

- B O has the memory stick, yet we have to do the arrests before Keshe can come over here
- because he is from Iran, it would blow open the entirety of the cabal media

**Caller1:** we need bigger help at this point

**T:** the most important thing Rana Mu said: she is a galactic from 275 million years in our future

- yes, the momentum is increasing
- as we do this, we change the timelines; as we change the timelines, they can come in
- Rana Mu also said yesterday: there are no dates but in 12 days or so - halfway through May [May 15]

**Caller2:** are we going through this chaos to a breakthrough?

**T:** Rana Mu said about St Germain - Wall Street went up again - St G is going to pull the plug from Wall Street and it will all crash

**T:** knows we are supposed to have a relatively good summer: yet what is happening now cannot continue and call it a "good summer"!

- Discussion of changes in sleep patterns; clarity of mind;

**Caller2:** has heard the way we work with groups and with each other: the groups is the way the abundance is going to come in - group consciousness - the more we do things, the more we amplify it

**T:** we get to work on some things: Bassett put 2 letters together

- on behalf of Penniston and Burroughs from the Rendlesham Forest
- a letter to all countries in the world about a global conference on disclosure

**Reading: Everything is Rigged: The Biggest Price-Fixing Scandal Ever**  
Matt Taibi

[SEE BELOW]

**Audio: from the Citizens Hearing**

**Dr Robert Wood** used to work for McDonald Douglas  
did some research on UFOs  
1970 - 1993 studied Ufology as a hobby

**Audio: Bill Maher**

- Obama in Mexico; going to Costa Rica
- talks of those who want to go into armed insurrections
- Pope Benedict has moved back into Vatican: had crashed in Papal summer home called Gondolfo  
now there is a sign on the fridge about taking turns to be infallible!

**Guests:** Laurence O'Donnell, host of Last Word on MSNBC

Marc Maren, host of WTF

Jeremy Scahill [still alive!] [Jeremy says Bill is big in Somali!]

[**T:** a big fire in CA - about 4,000 homes to evacuate

Also just saw that Israel bombed Syria!]

**Audio: Max Keiser Keiser Report: Paper Jihad (E439)** Published on 2 May 2013  
[http://www.youtube.com/watch?feature=player\\_detailpage&v=aNrJmkBqE18](http://www.youtube.com/watch?feature=player_detailpage&v=aNrJmkBqE18)

In this episode of the Keiser Report, Max Keiser and Stacy Herbert discuss paper addiction and the toothless, pimply faced paper pushers hooked on an ever-increasing fix of debt. There is no paper these guys won't push, no debt they won't inject into the veins of the economy and these addicts refuse to sober up despite the overwhelming evidence found in gold demand that they've reached a bottom at which no new hit can get them high.

In the second half of the show Max talks to John 'J.S.' Kim of [www.SmartknowledgeU.com](http://www.SmartknowledgeU.com) about the precious metals market, traffic jams outside bullion shops in Asia and central bankers buying paper.

**Reading: Voices of our Ancestors** about a young hunter who learned how to think like a bird, an animal, a tree; learned how to purify the wood which he used to make a bow

**Closing: Rainbird**

## 2013, Ap 25 **Everything Is Rigged~ The Biggest Price-Fixing Scandal Ever**

The Illuminati were amateurs. The second huge financial scandal of the year reveals the real international conspiracy: There's no price the big banks can't fix

[www.rollingstone.com/politics/news/everything-is-rigged-the-biggest-financial-scandal-yet-20130425?](http://www.rollingstone.com/politics/news/everything-is-rigged-the-biggest-financial-scandal-yet-20130425?)

Illustration by Victor Juhasz

By [Matt Taibbi](#)

April 25, 2013 1:00 PM ET

Conspiracy theorists of the world, believers in the hidden hands of the Rothschilds and the Masons and the Illuminati, we skeptics owe you an apology. You were right. The players may be a little different, but your basic premise is correct: The world is a rigged game. We found this out in recent months, when a series of related corruption stories spilled out of the financial sector, suggesting the world's largest banks may be fixing the prices of, well, just about everything.

You may have heard of the Libor scandal, in which at least three – and perhaps as many as 16 – of the name-brand too-big-to-fail banks have been manipulating global interest rates, in the process messing around with the prices of upward of \$500 trillion (that's trillion, with a "t") worth of financial instruments. When that sprawling con burst into public view last year, it was easily the biggest financial scandal in history – MIT professor Andrew Lo even said it "dwarfs by orders of magnitude any financial scam in the history of markets."

That was bad enough, but now Libor may have a twin brother. Word has leaked out that the London-based firm ICAP, the world's largest broker of interest-rate swaps, is being investigated by American authorities for behavior that sounds eerily reminiscent of the Libor mess. Regulators are looking into whether or not a small group of brokers at ICAP may have worked with up to 15 of the world's largest banks to manipulate ISDAfix, a benchmark number used around the world to calculate the prices of interest-rate swaps.

Interest-rate swaps are a tool used by big cities, major corporations and sovereign governments to manage their debt, and the scale of their use is almost unimaginably massive. It's about a \$379 trillion market, meaning that any manipulation would affect a pile of assets about 100 times the size of the United States federal budget.

It should surprise no one that among the players implicated in this scheme to fix the prices of interest-rate swaps are the same megabanks – including Barclays, UBS, Bank of America, JPMorgan Chase and the Royal Bank of Scotland – that serve on the Libor panel that sets global interest rates. In fact, in recent years many of these banks have already paid multimillion-dollar settlements for anti-competitive manipulation of one form or another (in addition to Libor, some were caught up in an anti-competitive scheme, [detailed in Rolling Stone last year](#), to rig municipal-debt service auctions). Though the jumble of financial acronyms sounds like gibberish to the layperson, the fact that there may now be price-fixing scandals involving both Libor and ISDAfix suggests a single, giant mushrooming conspiracy of collusion and price-fixing hovering under the ostensibly competitive veneer of Wall Street culture.

### [The Scam Wall Street Learned From the Mafia](#)

Why? Because Libor already affects the prices of interest-rate swaps, making this a manipulation-on-manipulation situation. If the allegations prove to be right, that will mean that swap customers have been paying for two different layers of price-fixing corruption. If you can imagine paying 20 bucks for a crappy PB&J because some evil cabal of agribusiness companies colluded to fix the prices of both peanuts and peanut butter, you come close to grasping the lunacy of financial markets where both interest rates and interest-rate swaps are being manipulated at the same time, often by the same banks.

"It's a double conspiracy," says an amazed Michael Greenberger, a former director of the trading and markets division at the Commodity Futures Trading Commission and now a professor at the University of Maryland. "It's the height of criminality."

The bad news didn't stop with swaps and interest rates. In March, it also came out that two regulators – the CFTC here in the U.S. and the Madrid-based International Organization of Securities Commissions – were spurred by the Libor revelations to investigate the possibility of collusive manipulation of gold and silver prices. "Given the clubby manipulation efforts we saw in Libor benchmarks, I assume other benchmarks – many other benchmarks – are legit areas of inquiry," CFTC Commissioner Bart Chilton said.

But the biggest shock came out of a federal courtroom at the end of March – though if you follow these matters closely, it may not have been so shocking at all – when a landmark class-action civil lawsuit against the banks for Libor-related offenses was dismissed. In that case, a federal judge accepted the banker-defendants' incredible argument: If cities and towns and other investors lost money because of Libor manipulation, that was their own fault for ever thinking the banks were competing in the first place.

"A farce," was one antitrust lawyer's response to the eyebrow-raising dismissal.

"Incredible," says Sylvia Sokol, an attorney for Constantine Cannon, a firm that specializes in antitrust cases.

All of these stories collectively pointed to the same thing: These banks, which already possess enormous power just by virtue of their financial holdings – in the United States, the top six banks, many of them the same names you see on the Libor and ISDAfix panels, own assets equivalent to 60 percent of the nation's GDP – are beginning to realize the awesome possibilities for increased profit and political might that would come with colluding instead of competing. Moreover, it's increasingly clear that both the criminal justice system and the civil courts may be impotent to stop them, even when they do get caught working together to game the system.

If true, that would leave us living in an era of undisguised, real-world conspiracy, in which the prices of currencies, commodities like gold and silver, even interest rates and the value of money itself, can be and may already have been dictated from above. And those who are doing it can get away with it. Forget the Illuminati – this is the real thing, and it's no secret. You can stare right at it, anytime you want.

The banks found a loophole, a basic flaw in the machine. Across the financial system, there are places where prices or official indices are set based upon unverified data sent in by private banks and financial companies. In other words, we gave the players with incentives to game the system institutional roles in the economic infrastructure.

Libor, which measures the prices banks charge one another to borrow money, is a perfect example, not only of this basic flaw in the price-setting system but of the weakness in the regulatory framework supposedly policing it. Couple a voluntary reporting scheme with too-big-to-fail status and a revolving-door legal system, and what you get is unstoppable corruption.

Every morning, 18 of the world's biggest banks submit data to an office in London about how much they believe they would have to pay to borrow from other banks. The 18 banks together are called the "Libor panel," and when all of these data from all 18 panelist banks are collected, the numbers are averaged out. What emerges, every morning at 11:30 London time, are the daily Libor figures.

Banks submit numbers about borrowing in 10 different currencies across 15 different time periods, e.g., loans as short as one day and as long as one year. This mountain of bank-submitted data is used every day to create benchmark rates that affect the prices of everything from credit cards to mortgages to currencies to commercial loans (both short- and long-term) to swaps.

### [Gangster Bankers Broke Every Law in the Book](#)

Dating back perhaps as far as the early Nineties, traders and others inside these banks were sometimes calling up the company geeks responsible for submitting the daily Libor numbers (the "Libor submitters") and asking them to fudge the numbers. Usually, the gimmick was the trader had made a bet on something – a swap, currencies,

something – and he wanted the Libor submitter to make the numbers look lower (or, occasionally, higher) to help his bet pay off.

Famously, one Barclays trader monkeyed with Libor submissions in exchange for a bottle of Bollinger champagne, but in some cases, it was even lamer than that. This is from an exchange between a trader and a Libor submitter at the Royal Bank of Scotland:

SWISS FRANC TRADER: can u put 6m swiss libor in low pls?...

PRIMARY SUBMITTER: Whats it worth

SWSISS FRANC TRADER: ive got some sushi rolls from yesterday?...

PRIMARY SUBMITTER: ok low 6m, just for u

SWISS FRANC TRADER: woouooooohooooooo. . . thatd be awesome

Screwing around with world interest rates that affect billions of people in exchange for day-old sushi – it's hard to imagine an image that better captures the moral insanity of the modern financial-services sector.

Hundreds of similar exchanges were uncovered when regulators like Britain's Financial Services Authority and the U.S. Justice Department started burrowing into the befouled entrails of Libor. The documentary evidence of anti-competitive manipulation they found was so overwhelming that, to read it, one almost becomes embarrassed for the banks. "It's just amazing how Libor fixing can make you that much money," chirped one yen trader. "Pure manipulation going on," wrote another.

Yet despite so many instances of at least attempted manipulation, the banks mostly skated. Barclays got off with a relatively minor fine in the \$450 million range, UBS was stuck with \$1.5 billion in penalties, and RBS was forced to give up \$615 million. Apart from a few low-level flunkies overseas, no individual involved in this scam that impacted nearly everyone in the industrialized world was even threatened with criminal prosecution.

Two of America's top law-enforcement officials, Attorney General Eric Holder and former Justice Department Criminal Division chief Lanny Breuer, confessed that it's dangerous to prosecute offending banks because they are simply too big. Making arrests, they say, might lead to "collateral consequences" in the economy.

The relatively small sums of money extracted in these settlements did not go toward reparations for the cities, towns and other victims who lost money due to Libor manipulation. Instead, it flowed mindlessly into government coffers. So it was left to towns and cities like Baltimore (which lost money due to fluctuations in their municipal investments caused by Libor movements), pensions like the New Britain, Connecticut, Firefighters' and Police Benefit Fund, and other foundations – and even individuals (billionaire real-estate developer Sheldon Solow, who filed his own suit in February, claims that his company lost \$450 million because of Libor manipulation) – to sue the banks for damages.

One of the biggest Libor suits was proceeding on schedule when, early in March, an army of superstar lawyers working on behalf of the banks descended upon federal judge Naomi Buchwald in the Southern District of New York to argue an extraordinary motion to dismiss. The banks' legal dream team drew from heavyweight Beltway-connected firms like Boies Schiller (you remember David Boies represented Al Gore), Davis Polk (home of top ex-regulators like former SEC enforcement chief Linda Thomsen) and Covington & Burling, the onetime private-practice home of both Holder and Breuer.

The presence of Covington & Burling in the suit – representing, of all companies, Citigroup, the former employer of current Treasury Secretary Jack Lew – was particularly galling. Right as the Libor case was being dismissed, the firm had hired none other than Lanny Breuer, the same Lanny Breuer who, just a few months before, was the assistant attorney general who had balked at criminally prosecuting UBS over Libor because, he said, "Our goal here is not to destroy a major financial institution."

In any case, this all-star squad of white-shoe lawyers came before Buchwald and made the mother of all audacious arguments. Robert Wise of Davis Polk, representing Bank of America, told Buchwald that the banks could not possibly be guilty of anti-competitive collusion because nobody ever said that the creation of Libor was competitive. "It is essential to our argument that this is not a competitive process," he said. "The banks do

not compete with one another in the submission of Libor."

If you squint incredibly hard and look at the issue through a mirror, maybe while standing on your head, you can sort of see what Wise is saying. In a very theoretical, technical sense, the actual process by which banks submit Libor data – 18 geeks sending numbers to the British Bankers' Association offices in London once every morning – is not competitive per se.

But these numbers are supposed to reflect interbank-loan prices derived in a real, competitive market. Saying the Libor submission process is not competitive is sort of like pointing out that bank robbers obeyed the speed limit on the way to the heist. It's the silliest kind of legal sophistry.

But Wise eventually outdid even that argument, essentially saying that while the banks may have lied to or cheated their customers, they weren't guilty of the particular crime of antitrust collusion. This is like the old joke about the lawyer who gets up in court and claims his client had to be innocent, because his client was committing a crime in a different state at the time of the offense.

"The plaintiffs, I believe, are confusing a claim of being perhaps deceived," he said, "with a claim for harm to competition."

Judge Buchwald swallowed this lunatic argument whole and dismissed most of the case. Libor, she said, was a "cooperative endeavor" that was "never intended to be competitive." Her decision "does not reflect the reality of this business, where all of these banks were acting as competitors throughout the process," said the antitrust lawyer Sokol. Buchwald made this ruling despite the fact that both the U.S. and British governments had already settled with three banks for billions of dollars for improper manipulation, manipulation that these companies admitted to in their settlements.

Michael Hausfeld of Hausfeld LLP, one of the lead lawyers for the plaintiffs in this Libor suit, declined to comment specifically on the dismissal. But he did talk about the significance of the Libor case and other manipulation cases now in the pipeline.

"It's now evident that there is a ubiquitous culture among the banks to collude and cheat their customers as many times as they can in as many forms as they can conceive," he said. "And that's not just surmising. This is just based upon what they've been caught at."

Greenberger says the lack of serious consequences for the Libor scandal has only made other kinds of manipulation more inevitable. "There's no therapy like sending those who are used to wearing Gucci shoes to jail," he says. "But when the attorney general says, 'I don't want to indict people,' it's the Wild West. There's no law."

The problem is, a number of markets feature the same infrastructural weakness that failed in the Libor mess. In the case of interest-rate swaps and the ISDAfix benchmark, the system is very similar to Libor, although the investigation into these markets reportedly focuses on some different types of improprieties.

Though interest-rate swaps are not widely understood outside the finance world, the root concept actually isn't that hard. If you can imagine taking out a variable-rate mortgage and then paying a bank to make your loan payments fixed, you've got the basic idea of an interest-rate swap.

In practice, it might be a country like Greece or a regional government like Jefferson County, Alabama, that borrows money at a variable rate of interest, then later goes to a bank to "swap" that loan to a more predictable fixed rate. In its simplest form, the customer in a swap deal is usually paying a premium for the safety and security of fixed interest rates, while the firm selling the swap is usually betting that it knows more about future movements in interest rates than its customers.

Prices for interest-rate swaps are often based on ISDAfix, which, like Libor, is yet another of these privately calculated benchmarks. ISDAfix's U.S. dollar rates are published every day, at 11:30 a.m. and 3:30 p.m., after a gang of the same usual-suspect megabanks (Bank of America, RBS, Deutsche, JPMorgan Chase, Barclays, etc.) submits information about bids and offers for swaps.

And here's what we know so far: The CFTC has sent subpoenas to ICAP and to as many as 15 of those member banks, and plans to interview about a dozen ICAP employees from the company's office in Jersey City, New Jersey. Moreover, the International Swaps and Derivatives Association, or ISDA, which works together with ICAP (for U.S. dollar transactions) and Thomson Reuters to compute the ISDAfix benchmark, has hired the consulting firm Oliver Wyman to review the process by which ISDAfix is calculated. Oliver Wyman is the same company that the British Bankers' Association hired to review the Libor submission process after that scandal broke last year. The upshot of all of this is that it looks very much like ISDAfix could be Libor all over again.

"It's obviously reminiscent of the Libor manipulation issue," Darrell Duffie, a finance professor at Stanford University, told reporters. "People may have been naive that simply reporting these rates was enough to avoid manipulation."

And just like in Libor, the potential losers in an interest-rate-swap manipulation scandal would be the same sad-sack collection of cities, towns, companies and other nonbank entities that have no way of knowing if they're paying the real price for swaps or a price being manipulated by bank insiders for profit. Moreover, ISDAfix is not only used to calculate prices for interest-rate swaps, it's also used to set values for about \$550 billion worth of bonds tied to commercial real estate, and also affects the payouts on some state-pension annuities.

So although it's not quite as widespread as Libor, ISDAfix is sufficiently power-jammed into the world financial infrastructure that any manipulation of the rate would be catastrophic – and a huge class of victims that could include everyone from state pensioners to big cities to wealthy investors in structured notes would have no idea they were being robbed.

"How is some municipality in Cleveland or wherever going to know if it's getting ripped off?" asks Michael Masters of Masters Capital Management, a fund manager who has long been an advocate of greater transparency in the derivatives world. "The answer is, they won't know."

Worse still, the CFTC investigation apparently isn't limited to possible manipulation of swap prices by monkeying around with ISDAfix. According to reports, the commission is also looking at whether or not employees at ICAP may have intentionally delayed publication of swap prices, which in theory could give someone (bankers, *cough, cough*) a chance to trade ahead of the information.

Swap prices are published when ICAP employees manually enter the data on a computer screen called "19901." Some 6,000 customers subscribe to a service that allows them to access the data appearing on the 19901 screen.

The key here is that unlike a more transparent, regulated market like the New York Stock Exchange, where the results of stock trades are computed more or less instantly and everyone in theory can immediately see the impact of trading on the prices of stocks, in the swap market the whole world is dependent upon a handful of brokers quickly and honestly entering data about trades by hand into a computer terminal.

Any delay in entering price data would provide the banks involved in the transactions with a rare opportunity to trade ahead of the information. One way to imagine it would be to picture a racetrack where a giant curtain is pulled over the track as the horses come down the stretch – and the gallery is only told two minutes later which horse actually won. Anyone on the right side of the curtain could make a lot of smart bets before the audience saw the results of the race.

At ICAP, the interest-rate swap desk, and the 19901 screen, were reportedly controlled by a small group of 20 or so brokers, some of whom were making millions of dollars. These brokers made so much money for themselves the unit was nicknamed "Treasure Island."

Already, there are some reports that brokers of Treasure Island did create such intentional delays. Bloomberg interviewed a former broker who claims that he watched ICAP brokers delay the reporting of swap prices. "That allows dealers to tell the brokers to delay putting trades into the system instead of in real time," Bloomberg wrote, noting the former broker had "witnessed such activity firsthand." An ICAP spokesman has no comment on the story, though the company has released a statement saying that it is "cooperating" with the CFTC's inquiry and that it "maintains policies that prohibit" the improper behavior alleged in news reports.

The idea that prices in a \$379 trillion market could be dependent on a desk of about 20 guys in New Jersey should tell you a lot about the absurdity of our financial infrastructure. The whole thing, in fact, has a darkly comic element to it. "It's almost hilarious in the irony," says David Frenk, director of research for Better Markets, a financial-reform advocacy group, "that they called it ISDAfix."

After scandals involving libor and, perhaps, ISDAfix, the question that should have everyone freaked out is this: What other markets out there carry the same potential for manipulation? The answer to that question is far from reassuring, because the potential is almost everywhere. From gold to gas to swaps to interest rates, prices all over the world are dependent upon little private cabals of cigar-chomping insiders we're forced to trust.

"In all the over-the-counter markets, you don't really have pricing except by a bunch of guys getting together," Masters notes glumly.

That includes the markets for gold (where prices are set by five banks in a Libor-ish teleconferencing process that, ironically, was created in part by N M Rothschild & Sons) and silver (whose price is set by just three banks), as well as benchmark rates in numerous other commodities – jet fuel, diesel, electric power, coal, you name it. The problem in each of these markets is the same: We all have to rely upon the honesty of companies like Barclays (already caught and fined \$453 million for rigging Libor) or JPMorgan Chase (paid a \$228 million settlement for rigging municipal-bond auctions) or UBS (fined a collective \$1.66 billion for both muni-bond rigging and Libor manipulation) to faithfully report the real prices of things like interest rates, swaps, currencies and commodities.

All of these benchmarks based on voluntary reporting are now being looked at by regulators around the world, and God knows what they'll find. The European Federation of Financial Services Users wrote in an official EU survey last summer that all of these systems are ripe targets for manipulation. "In general," it wrote, "those markets which are based on non-attested, voluntary submission of data from agents whose benefits depend on such benchmarks are especially vulnerable of market abuse and distortion."

Translation: When prices are set by companies that can profit by manipulating them, we're fucked.

"You name it," says Frenk. "Any of these benchmarks is a possibility for corruption."

The only reason this problem has not received the attention it deserves is because the scale of it is so enormous that ordinary people simply cannot see it. It's not just stealing by reaching a hand into your pocket and taking out money, but stealing in which banks can hit a few keystrokes and magically make whatever's in your pocket worth less. This is corruption at the molecular level of the economy, Space Age stealing – and it's only just coming into view.
