REVIEW OF THE BOOK BY VUK STAMBOLOVIC
ENERGY MEDICINE

AUTHOR'S FOREWORD

After almost ten years of to the research in the field of paranormal, during which I was absolutely dedicated to finding new, more efficient, alternative methods of healing the diseases that could not have been treated by traditional medicine, while deeply meditating, I contacted a spiritual energy that has undertaken my further development. The spiritual being showed me how to exercise and lower the brain-wave frequency, which was the basic prerequisite for the progress in the field of paranormal, it has been doing so all until I reached the limits of human capacities in that domain.

During the past couple of years I have been achieving my healing sessions as well as programming my products of energy medicine exclusively with the assistance of the spiritual, super-intelligent energies.

The three books I have written most recently: "Healing", "Places of Power" and "Holly Knowledge" are the result of what I have been told by the spiritual beings or energies while I was in deep meditation. I received the information through cognition and recorded them

simultaneously on the tape, because I could not remember a single thing after I came out of the meditation.

The complete given material of the book "Holly Knowledge" has been transferred with no changes and in the very order I was receiving it. I also kept the way the spiritual beings were addressing me during the process. Upon their request, and in order to save time, I have not received some of the topics that have already been published in my books "Healing" and "Places of Power", they have simply been copied in this edition.

The message that is contained in this book could be divided into four main segments:

The first discovery of the universe that gives us the true picture of its contents, its vastness, its history, development and its future. Nothing remained hidden or understated. This segment pays particular homage to the Creator, as someone that has created everything that exists.

Unraveling human misconceptions about the universe: the universe is not a world of matter but a world of energies; human civilization is not the only one there, but is at the bottom of the hierarchy of tens of millions of races, of both material and immaterial beings. But, it is still exceptionally important because it was given a task by the Creator; the task being the assistance in the development of luminous bodies, that are responsible for the maintenance of the universe.

Discovering what human capacities are in the field of paranormal. Also, instructions on how they can be used for the well-being and the development of the human race regarding health, harmonizing human thoughts with the Creator's will, obtaining the heating energy and electric energy from the universe, improvement of agriculture, changing climatic conditions.

The universal energies, even the Creator himself are almost begging us to come to our senses and rectify our way of thinking, because the damages of the earth's aura inflicted upon our negative thoughts have reached such a point that the cataclysm capable of destroying all the living beings on earth is at our doorstep.

While I was writing this book I started applying the assistance from the universe. This assistance is seen in the shape of healing energies and I have created a pendant called "Anti-Smog" that protects completely from smog and pollen, so the person wearing it can breathe pure air.

I hope that people will understand the appeals of the spiritual beings and save themselves.

THE HOLY KNOWLEDGE

In the course of the following months, approximately every other day, you will be receiving the knowledge, which will be the contents of a book you are going to write and which is to be called "the Holy Knowledge". This knowledge is completely new to you and to all the humanity.

The scope of human capacity covers a relatively wide area, but the people have completely neglected it, especially in the West. This has been due to the fact that they have turned exclusively towards the scientific and materialistic conception of the world around them during the past hundred or so years. The book will show what human capacities are in the domain of paranormal. It will encompass the sacred truth, as well as its overview and instructions on how to use it for the benefit and development of humanity.

You have been chosen for this mission because your capacities to deal with energies are exceptional, and the book will be dealing with the human capacities and the human need to use certain, to them still undiscovered energies. That is why the book will be very interesting

not only for its readers, but for you too, because you have the hunger and wish to find out new things from the field of paranormal energies. The book will contain the abundance of descriptions and ways of how different energies act. Also, it will contain the practical uses of these energies that you will bring closer to people either through your direct action or through the products.

BEFORE THE UNIVERSE THERE WAS THE POTENTIAL

The world of energies that you have been introduced to only partially represents the essence of the universe. Without the energies, the universe would be without its skeleton and would have no contents.

People say that the universe has no end, but they are not capable of grasping that fact. They are also not capable of grasping the fact that the universe has existed forever and that it shall exist forever. People are even less capable of understanding that last bit.

Has there been any sort of a beginning or has there been a time when there was no universe? That time did exist, but it is infinitely far away in the past and it can not be measured by any realistic temporal units. It is also true for the size of the universe – it has its end, but it can not be measured within the comprehensible system of measuring units. There was a time when there was no universe, but it is so far away that no measurement could be capable of showing it. Although that time is so far away from the present, people will still want to know about it. Therefore, one can say it in the language that could be understood by the people. Before the universe was created there had been a Potential that was capable of creating it. The time this Potential was created, however, is as far away from the first moments of the universe as the creation of the universe is from the present.

What is, actually, that Potential?

The potential was an immeasurably spacious, powerful and super-intelligent energy field that covered the space of the present universe. This exceptionally powerful Potential, that existed for the immeasurable time, felt a need to create new contents within itself.

What made the Potential to wish for that?

Its enormous intelligence and capacity to achieve everything it wanted made it necessary for the Potential to expand its own contents so that those capacities it had would be actualized; so that the Potential would change, realize, create a part of its immense capacities.

The aim was to transform one part of the Potential into a creation, an achievement. Its first task was to transform a part of its potential capacities into the energy field the vastness of which was corresponding to the vastness of the Potential. It engulfed the entire volume of the universe as we know it today. This energy field took over the capacities of the Potential out of all of its segments. The Potential wanted this Unique Field to take over the further organization and realization of new contents within the Potential. The Unique Field was only one manifestation of the Potential, and as such it could only realize what the Potential wanted. Because of this it has not achieved anything that has not been to its smallest detail according to the wish of the Potential from its creation to this day.

THE CREATOR

After it had created the Unique Field, the Potential finished its potential period and commenced the creative period of its existence. Thus the name 'Creator', because all creations in the universe began there.

The beginning of the creation of the universe was, therefore, represented as the creation of the Unique Field. By giving all the power, all of the knowledge and all of the capacities to the Unique field that he himself possessed, the Creator has secured an enormous all-encompassing creative energy. His own potential did not participate in the process. It had absolute control over the complete contents of the universe and the process of its creation. At first, the Unique Field was creating energies that were the sprouts of great energy complexes. Therefore, they were the stifles in the embryos of great energies conceived by the creator so that they can be the contents or the skeleton of the universe. Those energies developed relatively quickly due to their super-intelligence and their awareness of the need to create the contents of the universe.

There was aberration to what the Creator had imagined, in the course of the development, because of the enormity of the universe and the particular complexities of the functions of these energies. In order to stop these and prevent further aberration, the Creator produced energies that were different from the usual energy structures. These had the power to correct all of the aberration thanks to its super-intelligence and knowledge, its indestructibility, i.e. its lack of capacity to merge with other energies, since they were to become a new energy, its eternal life or duration.

The necessity for these universal maintenance operators was becoming bigger and bigger since the universe was becoming more and more complex. The need for these energies is really strong today, but it is almost impossible for the Unique Field to constantly create this energy because of the remarkable complexity and contents of the universe, and the tasks that the Unique Field has. The Unique Field has ceased producing this energy approximately halfway between the beginnings of the creation of the universe and today. From that time on, certain departments within the universe, such as constellations, galaxies, or even certain small planetary systems have taken over the task of creating these precious energies.

THE CHRIST ENERGY

After he had activated the embryos of the future vast energy systems of the universe, the Creator followed its gradual development and tuned it with the general development of the universe. There are tens of great energy systems that are functioning in the universe today, but only three systems are interesting to humans.

The first one is the so-called "Braid of Christ Energies." They are a number of a couple of hundreds of energies, each one with its contents, its purpose and its energy characteristics. They are not equal in their intensity, but they are irreplaceable and necessary and that is why they are spread all around the universe, covering it completely. The feature of these energies is that at one point in the universe they braid themselves into a beam, and then they spread again, covering the universe. If we could draw a scheme it would look like this: they are moving towards one direction, pass the entire universe and return through the energy beam or braid.

What is the task of Christ Energy in the universe? This energy, as the strongest and most complex in the entire universe has a myriad of tasks that are connected to the maintenance of the normal functioning of the cosmos. Most of these contents and tasks are incomprehensible

to the human brain. We are going to deal only with those functions of Christ Energy that are interesting and important to people.

Christ Energy emits the energy wave that is called the Life Wave or the Life-Giving Wave, and it is spread all around the universe and engulfs it completely. The frequency of this wave varies from 2.6 to 26 Hz. The Life Wave carries programs within itself. These programs are capable of activating life in inanimate matter. Living beings are created through the activities of the Life Wave. In this manner, the inanimate matter starts to live, develop, multiply, adjust to the conditions of the environment, and change; at that, it is constantly under the influence of the Life Wave. Should this wave stop spreading around the universe, all of the living beings all around the universe would die. The Life Wave is, therefore, the activator, something that actualizes life, and the means of keeping it in constant flow. The Life Wave has created numerous living beings in the universe, and each of them has been adjusted to their own environments.

Special sort of living creatures are non-materialistic living beings, which consist only of energies, but they too have to thank the Life Wave for their development, multiplying, adjusting to their environments and their lives. Instead of affecting the inanimate matter, in their case the Life Wave triggered the spark of life in certain energy structures.

During his work on the development of the universe, the Creator was adding and developing great energy structures so that they could be the backbone of the universe. He added certain functions to them, including the tasks which, after they had been fulfilled, made the universe a versatile, richer, more developed world. That is the reason why the Christ Energy consists of hundreds of different energies, each of them responsible for finding solutions to the problems of the universe from its beginning.

Apart from the capacity and commitment to create a living world, the Christ Energy made it its task to take care about the cyclic creation of mature luminous bodies. They are the prerequisite for the normal functioning of the universe. The Christ Energy organized the development of the luminous bodies with the assistance of the beings that have free will, due to their unbound creativity.

Out of the tasks that Christ Energy has that have to deal with humans, we are going to mention its taking care of the planets and other places with living beings within the universe. This care involves constant watching over these life-given systems, and minding that they are safe, that cataclysms and the destruction of a large number of animals and plants do not occur. This may include the destruction of the planets themselves as well as other places where living beings dwell. At critical moments the Christ Energy adjusts the energy states and in this manner it prevents the cataclysms and ensures the further development of the living beings.

THE ENERGY OF THE HOLY SPIRIT

The Holy Spirit is the second energy in its importance that has been created by the Unique Field after the Creator's wish. This energy as well as the Christ energy are spread all around the universe and are everywhere. It came to being, just as the Christ Energy, at the very beginning of the creation of the universe. It is responsible for maintaining the global energy structures in the universe. At the same time its task is to create inanimate matter. You were introduced to the basics of how the inanimate matter is created. This energy is important to

the human species because it supports the Life Wave in its struggle to create living beings by giving life to inanimate matter.

THE SPACE ENERGY

The third, the biggest energy grouping, created by the energy field is called the Space Energy. As the two mentioned above, it is spread around the universe, but its functions are in a way different from the two. Its activities are different in different parts in the universe. Its operations are coordinated with the needs of a particular space within the universe: it is different in energy spaces and in inanimate or animate matter. Its role is very important, because it helps with the processes that take place there, without regards to whether they are energy based or whether they are in connection to the states of inanimate or animate matter. Concerning humans, the Space Energy helps him or her to clear certain conflict situations he or she has in regards to the nature, environment, i.e. to the air, soil, food, energies surrounding them. It also helps the energies and inanimate nature that is around humans. But the part of the Space Energy that dwells in humans helps them to solve problems they face when contacting nature. That is why this is a healing, developmental, and rejuvenating energy that helps the man to accomplish the tasks given to him by the Creator.

THE COSMIC CATAclysms

By creating the cosmos, the creator achieved the unity of the spirit, energies, matter, and living beings. This has been done during the eternal existence of the universe. However, there were periods in the development of the universe, especially during the first third of its existence, when the above mentioned elements were not perfectly synchronized. There were horrendous cosmic cataclysms that destroyed everything that had been being created for tens of billions of years. These cataclysms occurred because certain elements deviated from their tasks and goals. Afterwards, special attention was given to the role of the universal maintenance workers i.e. luminous bodies, who not only remove the existing aberration, but also watch over certain sectors of the universe so that there will be no aberration.

Approximately halfway into the age of the universe, the Creator initiated thorough changes in the structure of the universe. The main idea was to completely harmonize the universe and that only minor problems should be allowed to occur. In order for it to be done, many additional energies had to be introduced that would be operational within the entire universe or its particular segments. These energies would have to have very defined and limited functions. Some of these energies are the parts of the Christ Braid. From then on, the universe has been functioning fairly satisfying, with occasional aberration from normal flows. Luminous bodies are in charge of re-connecting to the normal flows. They are the maintenance workers of the universe, and they do their job on a satisfactory level.

THE EMERGENCE OF THE LIVING BEINGS

When did the first living beings in the universe come to being? After approximately one fifth of the age of the universe the Christ Energy was creating the wave of life that created, activated and maintained only the immaterial living beings. This was going on until one third of the age of the universe. Those beings were the energy structures that multiplied, developed, and to the lesser extent adjusted to new situations. Somewhere at one third of the age of the universe, the Christ Energy together with the energy of the Holy Spirit created the first material living beings. They were first created in certain areas of the universe that had the best

conditions for their development. Those beings were very primitive structures, but they could multiply and up to a point they could adjust to new situations, thus they could develop gradually.

THE DEVELOPMENT OF THE UNIQUE FIELD

After he had created one energy after another, the Creator was completing and making the functioning of the limitless universe more complex. However, during the first third into the life of the universe, a certain resistance arose, to the creation of the cosmos as we know it. This happened due to the inertia of certain energy fields that were the part of the Creator himself. Their inertia and aspiration to keep the existing state the way it is created certain difficulties in this period. They actually did not want to deal with the creation of energy fields all through the universe, their functioning, and remaining as such. That is why the Creator designed the Unique Field that in the first time had the task to completely control the rising, functioning, and stabilizing the new energies within the entire universe.

Gradually, after it had stabilized the functions of the first big energies, the Unique Field was capable of achieving the existence of certain energies. Later on, it was to a greater extent capable of taking over this function. So, since half the age of the universe, the Creator has not been doing anything directly. His ideas have been actualized through the Unique Field, whose power reached unthinkable of capacities.

THE CHANGES WITHIN THE CREATOR'S BEING

After he had transferred the role of realization to the Unique Field, the Creator released completely his limitless capacities to create the universe. Gradually, his own fields, which were resisting the changes due to their inertia, managed to fit in the new functioning of the universe. Bearing in mind these changes, one can say that the Creator changed himself in the process of creating the universe. What was it that happened when new energies were created? We ask this because we bear in mind that the Creator's energy field was completely fulfilling the universe.

Thanks to its limitless creativity, the Creator generated new energies within his own being. He also generated the energy fields with new characteristics and new functions that the Creator had not had. After these energies and energy fields had been created, the Creator withheld the essence of his being, while the newly created energy fields were stationed at certain parts of the universe, simultaneously with the Creator's field. These fields were completely independent one from the other. The only thing in common was that all these new energies functioned exactly the way the Creator designed them, they worked completely in harmony and were synchronized with the Creator's being.

THE IMPORTANCE OF THE INTERCONNECTIONS OF THE ENERGIES

In the process of creating certain energies the Creator decided that their interconnections could be very important in the functioning of the universe. Those connections had existed for a while within the very Creator's being. Later on, energy flows were created, in shapes of paths or rivers. These energy flows interconnected certain energy structures within the universe. Later on the Unique Field took over the role of the mutual energy field and all of the universal energy fields flowed into it and out of it. That is why the role of the Unique Field is incomparably bigger than the part that regarded the creation of certain energies. Because the merging and synchronization of the work of all the energy structures, regardless of their size,

is one of the most important tasks and functions of the entire universe. Designing the Unique Field, the Creator gradually adjusted its role and harmonized it with the development of the universal contents. From that time on, the Unique Field has had more or less the same role – creating new energies of medium and small size, because the big ones had been created long time ago. It has also had the role of keeping contact and synchronizing the work of all the energies within the universe regardless of the time they came to being; thus the name "Unique Field". By gradually developing the energy structure of the universe, the Creator was finding new contents that he developed in the universe.

THE ORIGINS OF THE INANIMATE MATTER

There was one issue in the development of the universe that was of great concern to the Creator. It dealt with the spontaneous expansion of the fields although their dimension and intensity had been defined by the Creator. This was the reason why a special energy had to be created, which would stop the dissolution of the fields and bring them back into their two-dimensional intensive framework. Reacting timely to these changes was why this energy was present in all the parts of the universe. However, quite accidentally, when two energy fields that were very near to each other expanded, they mixed their energies. This resulted in equal representation of both fields at one point in space. After being affected by the special Energy Denser of the Fields something strange and unexpected happened. Solid matter was created under the influence of the Energy Denser on the mixed energies. At first, this solid matter was in a shape of material particles that were smaller from the smallest particles known today. However, due to the further influence of the Energy Denser, larger and larger particles were created. They gradually established certain relations with the Field for Condensation. This field was the only one remaining after the other two fields had retreated. These relations defined an energy interconnection of energy particles that gradually led to the creation of atoms, and later on of molecules. The Energy Denser did not take these particles along when it left the region where it had created the solid matter, so the matter remained at that very place. In this way the connection with the Energy Denser was terminated. However, there was the constant energy connection with the energies these particles had been made of. This connection remained interrupted to this day. That is why matter does not exist as a separate entity, but is the condensed part made of the two energies and with the assistance of the Energy Denser which left the region after the process had finished.

WHY HAS THE CREATOR MADE THE UNIVERSE?

The initial phase of the creation of the universe was slow and it lacked systematism. It was so due to its enormity. Later on, approximately after one third of its existence, the Creator managed to connect the energies, systematize, and synchronize them. The next thing he did was to create a line of subsystems within the vast energies that withheld the main responsibility for the functioning of the system designed by the Creator.

These subsystems generated new ones, completely independently, thus building a network with no limits. This network was one of subtle functions of certain vast energies, their systems, and the entire universe.

The Creator did not have playing on his mind, as it was misinterpreted by some ancient sources. His intention was to create the contents of potentials that have always existed within him, or even the new ones that have emerged under the pressure of the old ones. He felt the need to actualize these potentials, just as a pregnant woman feels before she delivers her child. That was his wish, but it was also something that could not be avoided. One can not be

precise enough by saying that these potentials have matured after a lot of time and that they insisted on their actualization. It would be more fair to say that the feeling the Creator had within his entire being was more like a flood of wonderful feelings that could not be stopped and that have gradually, one by one, been transformed into energies that the universe was made of.

There is one area in the universe, where the Creator has not initiated the establishment of the contents similar to those in the rest of the universe. That part is very important regarding the space it takes up. Only the Creator as the Potential dwells there. The creator left this 'room' as a part of himself that had remained unchanged since times immemorial, and it is going to function forever as the Creator – Potential. No energies or matter that were created by him can enter it. It represents the pure substance of the Creator's genius. This is the part of the universe, or the part of the Creator one can not reach. It is sacred to the entire universe.

THE DEVELOPMENT OF THE PROTECTION AGAINST THE DISFUNCTIONING WITHIN THE UNIVERSE

The universe was made, we have already mentioned it, as the result of the Creator's will to design a complex structure of the universe that, in its most part, functions really well. However, due to the infinite number of the contents incorporated within, it is not possible to keep its perfect functioning. At first, the Creator removed certain dysfunction in the universe by directly acting upon those problematic energy structures. One third into the age of the universe energies were introduced that controlled the functioning of certain big energy complexes. About one half into the age of the universe, the Creator abandoned the existing system of the universal maintenance and started using the universal system that involved forming such precious energy structures that would be capable of solving all the problems, regardless of the energy structures within the universe, and regardless of the level of deviations from the normal. Those energies had to be very specific. They had to be super-intelligent and capable of solving any problem in the universe.

Since they were supposed to contact energies that did not function properly, and in order to avoid the danger of the malfunctioning energies interacting and leading to the creation of the third kind of energy, these precious energies had to be protected from any sort of damages.

The third condition these energies had to meet was that they had to last forever.

The initial phase when these energies were created was very problematic. This was so because they were supposed to be created as a concoction of the concentrates of knowledge and intelligence of a large number of energies and yet they had to be indestructible and everlasting. There were not many of such perfect energies and they were doing their jobs in an excellent manner, but due to their insufficient number, they could not do their repair work on time. That is why some great disturbances occurred in certain regions of the universe. In order to eliminate this fault, the Creator gave the task of creating this precious energy to the first beings that did not have a material body. The problem occurred again, this time due to the slow forming and development of this precious energy because all of these beings were super-intelligent, albeit without free will, so their creativity was constricted. Without the creativity the natural development of these precious energies would be very slow. Once the beings with free will were introduced, and they were exclusively materialistic in their nature, a great revolution took place concerning the velocity of the produced precious energy. This was the definite solution to the problem of how to create a necessary number of luminous bodies.

THE FURTHER DEVELOPMENT OF THE UNIVERSE

What would happen should the universe cease to exist? This question sounds absurd from the point of view of the Holy Knowledge, because the universe will never cease to exist. However, one could accept the question that concerns the further development of the universe. The universe will continue with its eternal development and will never cease developing, because it will never disappear.

What direction is the universe going to develop in? The present development of the universe points out to the tendency that it will develop further on. The universe is gradually going to be given more and more contents; these contents are going to be complex; its functioning is going to be more and more synchronized; living beings will become more complex and more developed; the luminous bodies – the maintenance workers of the universe will grow in their number so that they can cope with the growing needs of the universe. The universe may go through some revolutionary changes, as it did after the first period of its wavering development and great cosmic cataclysms. But these revolutions in the universe can not be predicted and planned, and they can only be a consequence of what may become of the universe one day.

THE THREEFOLD BEING OF THE CREATOR

By giving all of the power to the Unique Field so that it can actualize his creations, the Creator has enabled his entire being to fully immerse into the creation of the universe. However, one part of his being, around one third of it, has not been included in the creation of the universe from the very beginning. This part of the Creator's potential represents a special sort of knowledge and power that are considerably different from the rest of his being. It is actually the oldest segment of the Creator, its germ, so to speak, and his Potential grew out of it. The difference between this segment and the rest of the Creator's potential is that this core was ordered to create additional potential and could not be included in, or to be more precise, transformed easily into the creator of the Potential. This means that his function was only to make the potential, and the Potential itself has developed its own capacity to actualize, i.e. be creative. That is why this core will forever remain out of the further development of the universe. The rest of the Potential will deal with the universe. The space that the universe covers, or a part of its space where this core is situated, does not function in the same way as the rest of the universe. It has no energies within, or material created by the Creator. It contains the energy of the core and the energy of the potential is imbued with it. A part of the potential, that exists at the same part of the universe as the core does, is not active in the function of the Creator. It exists only as a potential. That is why one can say that the being of the Creator is threefold and consists of:

The core;

A segment of the Potential in the area of the core;

The rest of the Potential, that turned into the Creator out of the Potential.

After it had given enormous power to the Unique Field, the Creator ensured his maximum of creativity and its actualization through the Unique Field. However, the energies created by the Unique Field had its own creations and actualization, so that the process of creativity and its actualization was being spread all over the universe. Although, at a first glance, the Creator did not have influence on the creativity and their actualization of a vast number of energies in the universe, nothing in their creation happened without his approval. This system has been functioning thus for almost half the age of the universe. Possible aberration from the usual

behavior of the energies or mater within the universe are fixed by the maintenance workers – the luminous bodies who return them to their normal functions very safely and successfully.

DECOMPOSING OF THE MATTER

By organizing constant forming of the luminous bodies with the assistance of the living beings with free will, the Creator has completely solved the issue of the universal maintenance. However, besides the aberration from the normal activity of energy fields and the matter that is adjusted by the luminous bodies, there are other issues that are not so dangerous for the functioning of the universe, but have to be paid attention to, because the luminous bodies do not have any effect on them. These deal with issues that take place in different areas within the universe and are connected to the process opposite to the one of creation – they deal with the process of the decomposing the matter to its original energies. This process is very rare and happens only when celestial bodies, or some other sort of matter that does not separate from the energies they came out of, contact, completely accidentally, some wandering energies which resemble wandering tentacles of energy fields (Certain energy fields have thin endings and those endings that look like tentacles occasionally wander and touch the endings of certain fields they pass by). Their activity, that is, the activity of the energies they are composed of leads to the loosening of the connections between the energy fields the matter was made of and the matter itself. This loosening leads automatically to the gradual decomposing of the matter to its basic component, i.e. to the energies of two neighboring fields and the catalyst energy – the Energy Denser. This decomposing of the matter can be partial and complete, but once the wandering energy field has passed, the matter is never to be established, regardless of the intensity of its damage. This is so because the third element is missing – the Energy Denser, which is one that assists and enables the process of regenerating the matter.

This can be very rare and we mention them simply as something curious and interesting as well as the fact that apart from matter being created from the energies, there are processes that decompose the matter to its basic energy parts.

THE PROCESS OF CREATING THE ENERGIES

The Creator has insisted on the creation of intelligent and especially super-intelligent energies. How could this be? The process of generating new energies is by itself an exceptionally complex process, because the energies were created out of nothing, i.e. they were not created out of some other energies or matter. The Creator's energy and being were necessary for the creation of new energies. The entire process can not be explained to the people, but the essence of it can. It has to deal with the generation of the energy with the Creator's energy as the catalyst.

As I was explained while I was meditating, this process was or is very slow; it is as if something that looks like cells start forming around a small energy particle; these cells grow in numbers and join each other and the whole thing grows in one direction.

Energy and energy field were created in this manner. The very process took billions and billions of years for an energy or energy field to gain medium strength. That very same process of creating the energies was done by the Unique Field too. It also used the same principle and the same power that the Creator had when creating energies, including the unique field itself.

THE CREATION OF THE INTELLIGENT ENERGIES

The creation of the intelligent energies is an incomparably more complex process than the process of creating the unintelligent energy fields. It consisted of slow training the energies, i.e. gradual transforming the knowledge and intelligent capacities from the Creator himself onto each of the energies that he thought might have to be intelligent. This means that they were not created as intelligent, but that they just had the embryo of intelligence that was within them when they were created. However, the development of this embryo could not be independent. It had to be connected to the Creator's assistance, later on to the assistance of the Unique Field. This process, only on a larger scale of complexity and subtlety, resembles up to a point the developmental process of the luminous bodies with the assistance of humans. The luminous bodies also had all the genetic features of the mature luminous bodies in their initial phase, but their development depended on their contacts with the humans, their answers to human questions, and luminous bodies multiplied all the information gathered because they could grasp far more issues than the humans themselves.

MISCONCEPTIONS ABOUT THE UNIVERSE

The universe is not organized the way people imagine it. They mostly regard the skeleton of the universe i.e. stars, planets, nebulae, in one word – matter. The contents of the universe and its organization are quite the opposite from this. The biggest part of the universe consists of energies, while the matter is the least important one, concerning both its contents and the area it covers. People will have this misconception all until they accept the Holy Knowledge, because their capacities to prove the existence of the spiritual and other energies that are contained in the universe are next to nothing. That is why the book that you are going to write, based on what you are being told now, will be **THE FIRST REVELATION OF THE UNIVERSE** and it will give the true picture of its contents, vastness, history, development and future. Nothing of these will remain hidden and unsaid. Everything will be called by its true name and shown exactly as it is. That is why you have a great responsibility to present the Holy Knowledge given to you in the appropriate way. You will have our full support in this task.

BORDERLINE ENERGIES

While he was expanding and developing new powerful energies all around the universe, the Creator made a very powerful, efficient, all-imbuing and well synchronized energy network. This network has been responsible for the functioning of the universe for half of its age. The Creator remains to be the most important element of the universe with its threefold being: the core, the potential and the creative potential. By developing his idea about the contents of the universe furthermore, the creator has created a certain number of energies through the Unique Field that have been situated among the huge energy complexes, the most important being the Christ Energy, Energy of the Holy Spirit, Energy of Space and other big energy structures not important to humans. These energies have been situated at places where they touch at the borders of these energies. Their task is twofold:

To prevent protrusions and mixing of these energies and keep them within their frames.

To enable easy and simple contact among themselves, so that their activities and effects could be synchronized and give best effects.

These Borderline Energies are borderline sentries among these groups of energies and they take care that there should be no volatilization and that energy fields would not enter each other. At the same time they make maximum efforts to establish good energy connections among these groups. One has to understand that energy fields can exist within the same

space at the same time without disturbing each other and that the borders don't have to regard to space and time necessarily; they are completely different, they have energy in their nature.

ENERGY INTERSPACE

Starting from basic conditions for the functioning of the universe, the Creator has, again through the Unique Field, actualized his creative ideas regarding the creation of such energies and energy fields that were put in the interspace among the energy fields, enabling them to keep contacts, regardless to the vastness of the space between each other. These energies often connect important energy fields. At the same time, they don't have any connection with some other, less important energies that take up the space these new energies have taken up. There are many such energy sorts that are there to fill in, contact, separated, activate and deactivate, keep the status quo, as well as for some other tasks so that the vastness of the space and the immense versatility of the universal energies can be protected from aberration from the supposed way of functioning. All of these energies are of practically no importance to people and they will never contact them. They have been mentioned here only as a means for keeping the normal functioning of the universe and to illustrate the complexity and versatility of the universe.

WANDERING ENERGY FRAGMENTS

After he has given the Unique Field its enormous capacities, that are practically the same as the capacities of the Creator, he has taken burden off his creative potential and started dealing especially with creating. On its side, the Unique field has accepted to actualize whatever the Creator wanted without attempting to do anything that would be different from what the Creator had imagined. This perfect cooperation shall continue as long as the universe exists, therefore – forever, for the Creator has imagined it and programmed it that way. Other energies that were created with the assistance of the Unique Field also perfectly fit in within the scope of the Creator's desires and they actualize them perfectly. However, great energy groups such as the Beam of Christ energy, Holy Spirit and Energy of Space, whose complexity of activities is incomprehensible to humans, occasionally have problems with actualizing everything that has been planned in every part of the universe and at every moment. One of basic problems are the Wandering Energies. They are bits of big energy fields that have separated from their own fields and wander around the universe for a long time. In the process, they make contacts with different energies. These fragments are mostly in touch with the three above-mentioned energies, as well as some other ones not important to humans, since these imbue the entire universe. In most cases these contacts are harmless and they leave no trace. However, a part of these wandering fragments creates certain problems. They occur when they adjoin the great energies under certain circumstances and then they create a third kind of energy. This energy is harmless as a rule, yet it marks the bit that no longer has a fragment of its basic energy. As a result, their function is reduced or damaged. That is why these energies, or at least their dangerous part represent a problem in the functioning of the universe and they have to be removed. This is one of basic tasks Luminous Bodies have, because they have to maintain the functioning of the three energy complexes all over the universe at any point in time, since this is the fundament of the entire functioning of the universe.

The spiritual beings that transfer the Holy Knowledge onto me have pointed out the need to introduce the reader further on with the importance and role of the luminous bodies for the

development of the human civilization and each individual. In order to save time, I was recommended to use the true facts that Spiritual Beings have already told to me, and which I have already printed in my books "Healing" (1995), and "The Places of Power" (1998). Respecting their attitudes, I am taking certain excerpts from these books and they are: Luminous Body, Yellow Energy Core, Enlightenment and the Places of Power.

LUMINOUS BODY

Through the Unique Field, the Creator constantly actualizes the creation of different energies whose goal is to work in harmony with the needs of functioning of the universe. There is, however aberration regarding the normal energy behavior in the universe, which can occur due to the immensity of the universe and its contents. In order to keep the aberration at a low level, one has to correct them promptly so that normal functioning of the universe would constantly take place. Energies that could fulfill such tasks have to answer to these criteria:

they have to be consisted of such subtle super-intelligent energy that no other energy can change it in any way.
their super-intelligence has to provide them a suitable solution in any situation
they have to last forever

There is no such energy in the nature. Not even the Unique Field can produce it. It has to prepare itself for all sorts of actions. This development is best achieved along the living beings that have a free will. Since the Christ's energy is in charge of all the living beings in the universe, it emits embryos of future luminous bodies which then attach themselves to the auras of the most prospective living beings on certain planets. The luminous body has to spend thousands of years in order to cross the path from an embryo to a mature living being. It takes most luminous bodies, which are connected to living beings, between 150 and 200 thousands of years to accomplish such a task. Such a large number of luminous bodies make up a critical mass for the initiation of the regeneration of the aura of the planet they were created on. Later on, they will take up other responsibilities, helping wherever their help is needed. After the long time spent correcting errors in the universe, mature luminous bodies melt into the Unique Field, where they go on living forever, until the end of the universe.

HUMAN SPECIES GETS CHOSEN

144000 years ago human species has been chosen to accomplish this GREAT TASK. The competition was tough; it was humans against chimpanzee, dolphin, and pig. From then on luminous bodies have been activating the creativity process and development of human intelligence; in return, human creative behavior has been making it possible to develop from an embryo to the final stage of mature luminous body. In this way luminous bodies have, following the life of one man, reached a certain level of development. After this person died, luminous bodies took over the next human embryo in order to make another step forward in their development. Exceptionally creative persons managed to advance the development of their luminous body to such an extent that they reached the level just a step away from maturity. That is when one experiences enlightenment. It is the time when a person is given exceptional creative, mental, paranormal and physical capacities that can not be had by an ordinary human. If the enlightened person uses the given creative capacities for the development of the human society, the person's luminous body fully matures.

THE SECOND LUMINOUS BODY

Parallel with the maturing of the luminous body that followed lives of hundreds of human generations, another luminous body matures. This body was created from the yellow core of the person, as a consequence of its exceptional development during the person's life. After both luminous bodies have matured the enlightened person can regulate his or her length of life so that it can actualize all the programs it thought of regarding the development of the human civilization. After their biological life is over, both luminous bodies go to places of power where all the mature luminous bodies have been gathering for thousands of years.

The difference between the first and the second luminous body is that the first one originates from the spark emitted by Christ's energy and it developed gradually, following hundreds of human lives, until it reached maturity. Once it matures, it does not need to follow human lives any longer, and it does not take over human embryos any more.

"The second luminous body was created as a result of a person's exceptional development during the person's life. It represents, just like the first body does, the knowledge of the universe, but at the same time it is the conscious or the soul of the person. After his biological death, the conscious continues to ponder. His soul continues to live without the physical body in the shape of energy that the mature luminous body consists of. Gathering of mature luminous bodies at the places of power and their millennial stay there is a phase in reaching the big goal. Their role is to assist the development of persons who come to visit the places of power by imbuing with the luminous body of the visitor, thus transferring onto him the amount of knowledge it is capable of receiving. It will stay at the places of power all until luminous bodies of most people on earth mature. Once it has achieved it there is no need for the process of creating mature luminous bodies and it is terminated. That is when the process of cleansing the Earth's aura as well as the auras of other celestial bodies begins."

HOW I DISCOVERED THE EXISTENCE OF THE LUMINOUS BODY

Ten years ago I wanted to find out the source of information received through radiesthesia, so I performed an experiment with my extrasensory colleague, who observed it all. To our mutual surprise, he told me that the information had arrived from a certain spherical energy structure, which could be seen above my head. Little did I know then that this finding will have a crucial influence on my research in the field of healing sources and on my paranormal development as such. I had even more problems realizing that this energy structure played a crucial role in the life of all the people. I called it a *luminous body*, having in mind what the extrasense saw.

I was slowly gathering information on the nature of the luminous body by the ways of radiesthesia, by experimenting in order to find healing methods, through data it gave to me, as well as many conversations we had with it. This work was observed by the extrasense.

ORIGINS AND APPEARANCE

The luminous body begins its life as a spark, which represents its embryo where all of his future capacities are incorporated. However, this incorporated program is not activated automatically, it is merely a capacity that has to be actualized. Sparks come to Earth from the all-imbuing energy, which we can call *Christ*. When the sparks and pre-historic people were joined together, it marked the initiate period that led to the gradual development of their conscious, and so they were no longer animals, they were human.

People with a developed paranormal sight can see the luminous body as a spherical plasmatic structure the color of old gold, which at some points turns to dark-red. There is an

aureole around which one feels peaceful and quiet. It is never still. Like plasma, it constantly moves, creating bulges and dents in its surface in the process. This points out the fact that these movements are not superficial, but that there are movements inside too. A luminous body is situated in the space around us, outside of our body and the aura. It moves through the space at its own will, showing up instantly wherever it wants to be, without moving. However, there are limits to this. It can only go as far as 300 meters from the human body. The luminous body is a strong energy charge, composed of different sorts of intelligent energies, most of them precious, especially, as we named it, the yellow energy. It can emit these energies under certain circumstances, or it can take over new ones.

Each person has his or her own luminous body. To be precise, each luminous body has its own person. It plays an immense part from the conception of an embryo until the death of a person. It participates in the creation of our aura and our physical body.

THE FUNCTIONING OF THE LUMINOUS BODY

The work of the luminous body has a number of different directions, thus paving our way through life, and above all, strengthening our creativity. Although it shows us the best path we have to follow, the final choice is up to us. It sends us messages, but not with its voice. They reach our mind by paranormal ways, and, because this is so, our mind only partially deciphers them to us. Which part of the full quantity of messages sent is to be translated from the paranormal onto the normal level, depends to a great extent on the sensitivity of a person, as well as the person's mental and physical state. The luminous body is our spiritual creator and guide throughout our entire life. But, our death is not its death, too. It continues to live its eternal life. However, after the person it guided dies, it has to find another human embryo within 49 days. If it does not succeed in it, its final term is 60 days. It will, in the same manner, as in the previous case, follow the development of a new being, until its death, and then it has to find another child. And so they change lives of hundreds of people, one after another, until the luminous body, which once was a spark, reaches its ripe age.

Is there a connection with the luminous body even after we die? And is there a connection among those hundreds of people it changes during its development? After we die, our soul, or our conscious, as a separate energy structure, consisted of the white bioenergy, which have during our lives been an integral part of our aura, remains alive for a very long time, unless it is damaged. But, our complete life is integrated within the memory of the luminous body - everything that had happened to us, all the thoughts, wishes, all the experiences, and all the knowledge we gained. When the luminous body breaths the conscious into the new embryo, it recreates us, only this time in some other body, for our had to die due to its limited life span. But this newborn baby is not aware, nor will it be when it grows up, that it is the continuation of some else's life, and this person, as a rule, is neither his deceased father nor mother, nor any other relative. This 'predecessor' can be of any gender, nationality, race, religion, from any part of the globe.

This reminds of metamorphoses that a butterfly goes through, when it hatches from an egg as a caterpillar, which at the end of its life becomes a cocoon, within which it gradually changes, and becomes a butterfly eventually. Once it leaves the cocoon, it is not aware it was alive in another shape. The caterpillar, although it ceases to exist in its shape, does not die, it shall live as a butterfly, but it shall not be aware of it. Instead, it will consider that its life terminates in the cocoon.

Our parents have a task of creating our body in this life and to ensure our undisturbed mental and physical development by giving us love and sacrificing themselves for our sake. In this manner they insert a part of their being into us, it is also our task to do the same for our children. However, our real predecessor, and not our parents, is, according to the luminous body, the one person who lived before us, maybe on a completely opposite part of the world from our own, maybe it was of a different gender from ours, different color of skin and of other religion. Therefore, all the lives followed by our luminous body are not the lives of different people, they are our lives, only in different bodies, which lived in different points in time. The luminous body follows our life for thousands of years.

THE SELECTION OF A NEW HUMAN EMBRYO

There are two basic criteria that the luminous body employs to choose the new embryo. The first one is genetic. This criterion considers the intellectual and emotional features of the parents that the child will inherit. The second one is the sort and degree of the development of the cultural environment, for if the culture is high and supportive, then the creativity will be developed. The civilization surrounding us, and the educational models are even more important than the genetic basis. The luminous body will not choose an intelligent child in some forsaken place. It will rather choose a less intelligent one living in a civilized surrounding, where there is enough information, and whose parents are supportive and ready to work with their children, because it will ensure a bigger creativity to the new personality.

Should this person be creative, the luminous body will be able to improve itself to a greater extent, than it might have had in tens of earlier lives. If, however, this person is uncreative, the luminous body shall stagnate in its development, waiting for a new human embryo after this person dies.

THE MATURE LUMINOUS BODY

What happens when the luminous body matures? After it was being developed through hundreds of generations of people, the luminous body will be close to its maturing, to its full ripeness. This can happen within the life span of one very creative person. Such a person will reach a state of enlightenment due to his exceptional creativity, and this will lead to the massive increase of the creative potential the activation of which will bring its luminous body to its full maturity. Very often the enlightened do not use this opportunity and do not lead their luminous body to maturity. In this case, after they die, their souls go to the universe, and the luminous body chooses a new embryo. However, if the enlightened manages to lead his luminous body to maturity using its creative activity, something exceptional happens. Another mature luminous body is created out of the yellow core of the enlightened person. It represents a reward to this person for its immense striving and creativity during its life. So, in the process of maturing it is two, never one, luminous bodies that are simultaneously created. They are not equal. They differ in size and other characteristics. The first one is developed due to the creative work of hundreds of generations of people, while the other reaches its full maturity during just one life.

Once they have reached maturity, luminous bodies gather together and live at certain places on earth. There are many such places, and they are mostly at the sites of ancient temples. They are places where ancient peoples' civilizations started their development. Here one can also find luminous bodies that have not yet matured, but they are here only during the period between the death of the former and before the new person is chosen.

THE IMPORTANCE OF CREATIVITY

The luminous body is developed from the spark to its maturity only with the assistance of its human – it can not develop on its own accord. The very process consists of the following: our creative work forces the body to be constantly awake and active in order to follow our activities. This leads to its development. The development consists in the energy strengthening of the body and the increase of paranormal powers, dimensional increase and augmentation of the glow. Its development will not be constant. In some of our lives we will help its development to a great extent, whilst in other there will be a stagnation; at the same time the only criterion will be our creativity. Yet, after many generations the luminous body will attain its full development, it will be mature. As human assistance is necessary to support the development of the luminous body, once it is mature and attains perfection, it no longer needs people. Everyone of us will sooner or later be enlightened and cease to exist in human form, like a large number of people has already been. It is everyone's aim, and from life to life we are closer to it. The luminous body, once it matures fully, continues to live forever.

THE LUMINOUS BODY AND REINCARNATION

Regarding the philosophy of reincarnation, what I realized regarding the luminous body speaks of two very important differences. According to the philosophy of reincarnation, the soul of the deceased person returns to a new human embryo after 49 days at the latest. According to what I found out, the soul goes to the universe after a person's death, where it lives for a long time and never returns to the Earth. At the same time, the perfect copy of our soul (or our conscious) can be found in the luminous body of that person. The luminous body takes over a new human embryo within 49 days.

Another difference is that, once the perfection is achieved, the person becomes enlightened, and this person does not reincarnate, he or she does not return as a human - his or her soul goes to the universe where it lives forever. According to what I found out, the very act of enlightenment is commenced at the moment when the luminous body is very close to its maturity. Its role is to increase creativity of the person to the maximum so that the luminous body would achieve the full maturity as soon as possible. If the enlightened person does not succeed in this, its soul shall, like all the previous ones, go to the universe, while its luminous body chooses a new embryo and in that way continues creating a new man, and the enlightened will indirectly return to the Earth. If, however, it succeeds to lead its luminous body to its full maturity, because of its creative power, its soul will not, after the person's death, remain just an energy being. The person's yellow energy core within his the aura will reach a level of a mature luminous body, and so the enlightened will be rewarded for his efforts, and his conscience will become a new, completely new luminous body. It will, as the luminous body that followed him throughout all of his lives, live forever, and there will be no danger of it being damaged. It will have a capacity to move wherever it wants, but it will also spend long time in the places of power where such bodies gather together.

WHAT HAPPENS TO THE SOUL AFTER DEATH?

The soul of the previous, deceased, body, is not transferred to the new being. It goes to the universe. A young soul is generated and developed simultaneously with the new body out of aura remains of dead microorganisms and other plants and animals from its surrounding.

When it leaves the body after its death, the soul consists of white energy, which was an incorporated part of that person's aura, and is an intelligent energy being with its conscious incorporated in it.

After we die, our life continues in two following forms:

as a soul which is our conscious, and which has no connection with our previous lives, apart from the last one, nor shall it have any connections with our future lives or the luminous body. In principle, it lives a very long life, if it avoids various dangers that can damage it or fully demolish it, especially on its way to cosmic sanctuaries.

as our luminous body which has all the data on our previous lives, including the last one to the tiniest details.

HOW A LUMINOUS BODY GATHERS KNOWLEDGE

Even though the paranormal world is so much different from the normal one that even the most vivid imagination can think of, nothing accidental happens within it. Laws of this world rule here, and everything happens according to them. The luminous body can not find out anything of a person, for example, if it does not establish a contact with it. As there are no senses, it uses its beam for contacts. This way of communication, however, gives a lot more information than senses do. Besides its complete insight into the mental and physical health of a person, and what it knows of its thoughts, plans, wishes, fears, it sees his or her past, and possible alternatives of the future. In order to find out facts on various phenomena, the luminous body uses its powers to obtain them from the sources at their hand, such as mature luminous bodies at places of power, spheres of knowledge and others. Once it gains the knowledge, it is, due to its super-intelligence, multiplied and innumerable new conclusions and facts are drawn out of it. People can not even presume what levels of knowledge luminous bodies have, and they can not grasp their intelligence.

THE COMMUNICATION BETWEEN A PERSON AND HIS OR HER LUMINOUS BODY

The moment a spark is attached to a person, this person's capacities to develop increase substantially, and he starts to develop in a much faster tempo. This tempo has not always been the same. In the beginning, he advanced slowly, and his spark developed slowly too. Once a person's spark achieves a third of its development, its development and the development of its human become faster substantially. The fastest development is achieved when the luminous body is left with 3 – 5 % to mature fully.

The development of a human is seen through an increased intelligence, greater creative achievements and inclinations, increased ability to understand and see paranormal phenomena. The development of luminous bodies can be seen in the increase of the energy potentials of a generous energy, as a result of their striving to contact sources of knowledge. All the knowledge and answers to their questions are given to luminous bodies by the sources of knowledge, which can be found at places of power. These sources can be mature luminous bodies, or energy fields created by luminous bodies, which represent a unique encyclopaedia of knowledge. They are capable of replying to almost all questions. These energy fields were made to put to disposal a part of enormous knowledge of mature luminous bodies to developing luminous bodies. Out of these treasuries of knowledge, the developing luminous bodies gain easier access to answers to their simple questions, rather than getting them from mature luminous bodies, which give answers only to the most complex questions.

The way of asking and answering follows the energy beam, which goes from a developing luminous body to energy field, or a mature luminous body residing at a place of power. It consists of infinite number of energy channels. Information flow down these channels in the shape of energy. Answer given in this way is memorized in the developing luminous body, and the information, adjusted so that a human can grasp it, is directed through a similar but simpler beam to the aura. This beam touches the outer, least dense part of the aura, where energy information reaches the ends of information channels, which, gradually, lead the information energy from the aura's surface to the contacts with the nervous endings in the body. Following the peripheral nervous system, the information reach the brain and are decoded to a smaller or greater extent.

In this way the brain either understands something, or is given an idea to do something. Choice of a segment of information will be correctly understood, depends on whether the information channels are conductible within the aura and the exceptional capacities of the contact joints at nervous endings within the body. A possible level of taking over the information is high, but it can be substantially reduced due to various clogging of channels in the aura and changes on nervous endings at nervous joints. The questions the brain asks, on some phenomenon or regarding solving of a problem are emitted into the air in shape of thoughts as spherical energy waves and as such they reach a luminous body. It is a mechanism of a reciprocal development of a man and his luminous body. Information achieved from the source of knowledge, as well as those from the man, are systemized and enriched because of its enormous intelligence, and in this way they create an incomparably larger volume of knowledge from the one it received.

THE SPECIAL CAPACITIES OF LUMINOUS BODIES

A luminous body, as you called it, actually represents a man's potential through a large number of generations. It is necessary to point out to certain deviations of the luminous bodies' behavior from the classic ones. They occur in two exceptional situations when a luminous body is given an impulse, from its own genetic code, to act differently.

The first one relates to a situation when someone's life is in danger and needs to be protected. This is a person of special importance for the development of mankind. In that case a luminous body uses certain potentials which are there for such purpose only. Its capacities and power overcome those used for normal functioning. It is even possible in such cases to bring back to life a clinically dead person.

Another situation is in connection to a capacity of a luminous body to give a person certain powers by transferring a part of its generous energy into the yellow core of this person. Such way of transferring the knowledge and power sometimes leads to enlightenment.

THE COOPERATION WITH THE LUMINOUS BODY

Once I learned about the existence of luminous bodies, during the described experiment, I contacted it every day using the plumb line. Since this way of communicating is very limited, it was necessary to invest a lot more effort in order to attain just a piece of information. Yet, the luminous body had for more than seven years been the only paranormal source of information that I was capable of addressing, alone or with the assistance of the extrasense. The help that I thus received from the luminous body was so important that I would remain where I had been without it. Through this help I was given ideas; had the ability to use new powers; they

could be transferred onto me; I could organize and use it, and, also, interpret these phenomena. Our contacts were more frequent and more intimate. And then, five years ago, a constant beam between us was established, and I hope that it will not be interrupted as long as I live. The extrasense told me on one occasion that our contact was so intimate that it momentarily reacts to my every appeal or a wish.

For a couple of months after establishing my first contact with it, after I sent a paranormal order to it, I succeeded in leading it to heal patients. The extrasense was observing this and he first saw the energy waves, that looked like a rocket launching, emerging from the back of my head on the way to the luminous body. As soon as they reached it, it instantly reacted by directing the energy wave towards the patient's aura. A couple of months after we had discovered the existence of the luminous body, the extrasense managed to speak to it. It helped us to gain information much faster and more precise than we had using the plumb-line.

SEEING A LUMINOUS BODY

In order to see a luminous body one has to come to a certain level of paranormal powers. Many people in the past and present must have had a necessary level; however; no one succeeded in doing it, for it has not been mentioned in literature on this topic. The luminous body explained it to me that many people, who were capable of seeing it, never paid attention to it, because they had other fields of interest.

THE YELLOW ENERGY CORE

Yellow energy and the creation of the yellow energy core of the aura plays a vital part in the normal and paranormal development of a human. Normal aura consists of gray and white bioenergy, while the apparition of strings of yellow generous energy – the same matter the luminous body consists of, represents the beginning of maturity of the aura. This yellow energy core, made of a number of sorts of yellow energy, is created in the center of an aura that is in the abdominal-thoractic area of the body. This core can be created in two ways: by long-term efforts in creativity, or by wearing my healing talisman.

The yellow energy core sprout that was created in this manner will gradually be developed due to further creative work of this person.

Yellow energy core of an aura has three basic functions:

It enables the aura to mature,

Human aura is given a capability to develop independently, and so in accordance with the advancement of the yellow core, less conditions for its development are necessary,

It leads to a strong development of creativity.

Even though it is necessary for the creation of the yellow core to engage substantial creative efforts, once it is created, the creativity arises as a need, it seeks itself. To the person who has initiated all the functions of the yellow energy core, this represents the beginning of his liberation from his own astrological and karmic predestination, as well as from the fact that his life depends on everyday circumstances.

Yellow energy outside of the core is a part of the aura and it shows its state, while the yellow energy core, also created of the same yellow energy, is the essence by itself with its own conscience; it is the purpose of the aura. It becomes a new, conscious being, a small luminous body, the development of which is controlled and assisted by the person's luminous

body. The yellow core shall, sooner or later, after the enlightenment, become a mature luminous body. The soul or the conscious of this person, will identify with this second luminous body, instead of going to the universe, and once it identifies with it shall continue to live forever, for the mature luminous body is indestructable.

THE ENLIGHTENMENT

There is no bigger goal in life for a human than his enlightenment. No treasure can compare to it; no power; no knowledge. Any man can achieve the enlightenment, but it will be much easier for a person whose luminous body is highly developed. When a person reaches it, his aura becomes perfectly clean. The man does not have to be aware of the existence of this goal in order to be enlightened. Many thinkers, writers, artists, religious philosophers and others were enlightened without being aware of the existence of such a notion. They brought their auras to the state of purity with their positive thoughts and deeds during their lives, and the purity of the aura is the prerequisite of enlightenment.

An enlightened person goes through very important changes:

In a physical sense the person is rejuvenated, active, one's physical capacities grow, chronic illnesses disappear, they are tireless, they sleep only for 2 to 3 hours a day.

Mental changes lead to a calm and blissful state because many fears and worries disappear because the person can foresee events, and any kind of surprise is out of the question

Changes regarding paranormal powers are certainly the greatest. The enlightened can clearly see past and future, they can see a cause and type of disease and know how to remove them by using energies. One can read mind, see at great distances, move objects, levitate, understanding of the nature of all energies. The source of their great wisdom and knowledge gives them a capacity to constantly contact mature luminous bodies, spiritual beings and the very Unique Field, i.e. the Creator.

Regarding the normal powers, there are no matters that can not be understood, starting with the perfect knowledge of the functioning of the entire organism, human psyche, solving economic problems, producing food, even the positive influence on masses, strengthening tolerance among people and states, and securing peace in the world.

The enlightened person is given the task to use its newly acquired capacities to the maximum, and help the development of the human civilization. The final goal of this process is for as many people as can be to follow the Creator's path. Only then will the hopes of the Creator and effort put in those persons by the spiritual beings, as well as the person's own efforts, bring fruit.

PLACES OF POWER

Around 138,000 years ago, that is, 5000 years after the sparks of luminous bodies had joined the pre-historic human's auras, about thirty luminous bodies matured. They gathered together and formed the first place of power, in the air, above the square among a group of huts in pre-historic people's village. These people were chosen because they luminous bodies found them most likely to advance. This happened at a place called Jaipur, some 200 kilometers south of New Delhi, India. Today it has 3,000,000 inhabitants. It is the first place of power and it still exists. This place of power is the most powerful one on earth. I visited it with my family and some of my followers and friends in September this year.

Later on, with the creation of new mature luminous bodies new places of power were formed at different continents, following the development of the human civilization. When first solid

buildings or temples were created, places of power moved above them. Today there are 87 places of power.

What is a place of power?

It is usually a temple or remains of a temple, where some of ancient civilizations such as Incas, Mayas and Aztecs in North and South Americas were created. The places of power are also: the Sistine Chapel in Vatican, Rome, Westminster Abbey in London, Holy Mountain in Greece, Aia Sofia in Istanbul, the Wailing Wall in Jerusalem, three pyramids near Cairo: Cheops, Chephren, and Mycerinus, some Buddhist and Hindu temples and many others.

What are the contents of the places of power?

They are mature luminous bodies that levitate two hundred meters in the air. They are gathered in a shape of grapes, and they constantly move. There can be from 30 to 772, as in Jaipur, of them at one place of power. Their power mainly depends on the number of the present luminous bodies and the civilization they represent.

The role of mature luminous bodies at places of power is to transfer a part of their enormous knowledge to a person whose luminous body is relatively developed. The transfer of knowledge goes as follows: the mature luminous bodies approach and imbue with the visitor's luminous body, which always follows the person and can not be more than 300 meters away from him. To those who can see this phenomenon it looks as two balls of fog passing through one another and then separating. The number of mature luminous bodies that are to imbue with the visitor's luminous body depends on his or her development. If it is not developed there will be no imbuing, if it is developed it will imbue with all of the mature luminous bodies at a place of power. The knowledge taken over will later be used by the visitor's luminous body to encourage this man's creativity and give him new ideas. Many places of power are archeological sites today, or active places of worship visited by a large number of people, and none of them are aware that they arrived at a place of power. It is one visitor's luminous body in ten thousand that is lucky enough to experience the imbuing with the mature ones. All of the others are not given the possibility, because their auras are not clean enough or because their luminous bodies are poorly developed. Yet, they too have benefits off these visits because they made contacts with the fields that exist at every place of power

THE ENERGY FIELDS

Besides the mature luminous bodies, places of power also contain three fields: Light, Creator's Presence and Peace.

Light is a huge energy field the center of which is 50 meters beneath the place of power, but it affects all the visitors, cleanses their auras, makes them feel refreshed and fine. It also makes them respect the temple and a wish to return there. People with paranormal capacities can contact this field and enter it.

Creator's Presence is the main element of a place of power. It is known that the Creator never realizes his intentions himself, that he does it through the Unique Field. In this case the creator has decided to act directly in order to emphasize the importance of the place of power and to show that he takes care of this place of power. That is why the Creator's Presence is a precedent of a rare kind. Out of the entire planet, only the places of power are honored with

the active participation of the Creator. It is situated beneath the field of Light and it has a diameter of 50 meters. When I contacted this field, I could see a completely clear space 100 meters underground, although it normally consisted of stones and soil. This particle of the Creator's energy is active in a way that is not clear to humans, but has been influencing the positive development of the civilizations belonging to the temple through thousands of years.

The **Peace** field is a gigantic energy field, it spreads up to 50 kilometers in diameter. It makes the visitor experience peace, relaxation and safety. By doing so it directs him to enter deeper in the field and finally reach the place of power. Similar experiences played an important role in keeping the priests and other people of the temple from leaving it. This capacity of the field was of great use when smaller human communities were gathering in prehistoric times. Their decision to live in the vicinity of the places of power guaranteed their faster development.

THE IMPORTANCE OF THE PLACES OF POWER FOR THE DEVELOPMENT OF THE HUMAN CIVILIZATION

Throughout the history of the human race, places of power played a very important role, because the civilizations of various peoples began their intensive development and blossomed fully at the time of their dwelling at places of power. That is why one can claim that the places of power have been the main factor of the development of the human civilization.

The places of power prevented the occurrences of cataclysms, wars and other disasters on many occasions. Many places of power in the world were aware of the last of the cataclysms we know of as "the Flood" that occurred 7000 years ago that happened because a large celestial body passed by the earth, and they had timely warned the people to move away from the flood. The most important warning of all was the warning that was given by an enlightened priest from the place of power in Mesopotamia, where the Sumerian people lived, who were the most advanced civilization on earth. This man was not Noah, as the legend says, and people were not saved in the Noah's ark. They saved their lives by hastily migrating towards mountains in order to run away from the tidal wave that destroyed everything before it.

All the places of power on earth are connected through the three fields, and with those they are connected to all the places of power in the universe, where their role is similar to the one on this planet.

Benefits from the places of power

Persons whose luminous body is developed have outstanding benefits from visiting the places, but we talked about this. However their ratio is 1 to 10,000. What happens with the vast majority of visitors to the places of power? They too benefit from the visit because they must have spent at least an hour or two in the fields of Light, Creator's Presence, and Peace. As a consequence of this in the following couple of months they experience good mood, calmness, a kind of quiet happiness, improvement of health conditions, increased creativity, clearer overview of their problems, and they find solutions to these easier.

Those in possession of paranormal powers can advance. After my visitation to Jaipur in India, I completely developed the capacity to disassemble blood clots and to clean the blood vessels of the heart or some other organs from fat. The energy beam that I work with activates a biochemical process that completely dissolves these fat layers one by one, and the patient feels it immediately, since his pains disappear.

Places of power in the present

One could presume that the places of power were important only in the past, while they are insignificant on the present level of the human development. However, this is not true. Great capacities are hidden in the three fields of Light, Creator's Presence, and Peace, and they have never been used. In order to activate these capacities one has to have great paranormal powers. I have the powers. One could act simultaneously with the fields of Light from all the places of power on earth, and it produces great power. One can also do the same with all of the fields in the universe, which is something I am still not capable of doing.

Light can affect any field of human activities: healing, cleansing of the aura, advancing in the field of the paranormal, on individuals as well as on groups of people at the same time. By doing this one can assist in asserting the peace in the world and creating the healthier, advanced and happier human community.

The Creator's Presence acts regarding changes. It is a developmental, gradual activity that harmonizes the individual's thoughts and thoughts of larger groups of people with the Creator's path. This leads to improved human relationships, tolerance, awareness of a possible co-existence, removing war tensions, inter-national and religious hatred.

Simultaneous activities of all the fields of Peace have extraordinary power. This power can encircle a large number of people at the same time; it creates tolerance among people and it especially creates kinds of mutual goals that are in accordance with the Creator's will.

No one had heard of places of power until the extrasense I cooperated with and myself received information on them from our luminous bodies. That is why our previous visits to the places of power were accidental and unintentional. We would simply go to visit the archeological sites, or a temple out of pure tourist curiosity. No one had any idea what it was all about. We went to the first journey to a place of power in 1991. For a couple of years only my family and I went to these places. Three years ago I visited the Sistine Chapel in Vatican, together with 26 attendants of my 'Road to Enlightenment' seminar. Two years ago, 40 of us went to visit Aia Sofia in Istanbul, Turkey, and 55 of us went to visit the Chilandar monastery. A couple of smaller groups, and tens of individuals from Yugoslavia and Slovenia went to Chilandar, Aia Sofia, and Rome in the past years. My family went to India with a small group of friends and seminar attendants and visited Jaipur, the strongest place of power in the world, as well as other three places of power.

My book "Places of Power", that was published in September last year will contribute to the popularity of places of power and help the truth about the places of power to spread around the world very soon.

People will visit them more and more, aware of the fact that they will benefit from the visit, that they will be healthier, more creative and happier.

Places of power in the future

In 143,000 years since humans joined their luminous bodies, 15,000 of luminous bodies matured, and there are 87 places of power. However, there are predictions that say that in the following 50 years the number of the mature luminous bodies and places of power will be doubled. How can this be achieved?

Teachings based on full truth about the importance of places of power not only for the development up to now, but for the development in the future, development of the human civilization and importance of luminous bodies for the development of humans will spread at various places on earth. Around the year 3000 this knowledge will be accepted as a fact all around the world.

In 12,000 years almost all of the luminous bodies will mature and the human civilization will cease to exist.

THE UNIVERSE IN A BILLION BILLIONS OF YEARS

The Creator has created the universe as he wanted to. Yet, at the very beginning, his idea did not encompass the complete state of the present universe. It only had basic contours and most of the necessary details. However, in the process of creating the universe, certain deviations occurred, regarding to what the Creator has imagined, and corrections had to be made on the way. Still one can say that the universe was created as the Creator had imagined it. The universe will continue with its development, in accordance with the Creator's idea, for its present state is not the final product, and the present moment is not an important time in the development of the universe. It will be continually developed, its functions will be more complex; its energies, matter and living beings more advanced. This process will never end, for the universe will never end.

What changes are expected within the universe during the following billion billions of years?

The changes in the behavior of great energies and energy groups will be practically unnoticeable. However, the changes within the less important energies will be more noticeable and will deal with their improved coordination with other energy structures in the universe. The changes regarding the inanimate matter will be reflected in the increased mass of inanimate matter through accidental contacts of energies that will make them. The reverse process, the decomposing of matter into energies is very rare, so this process will result in the slow and mild increase of inanimate matter in the universe.

Concerning the living beings, new species will come to life in the universe. This will be done by the Christ energy, and other animal and plant species will gradually develop. In certain parts of the universe some of the most developed species will be chosen to create the luminous bodies – the maintenance workers of the universe. In such cases, these species will develop much faster than they have until that moment. After the great goal has been achieved, this animal species, without the further assistance of the luminous bodies will degenerate and disappear.

However, most of the non-material beings, as it has been so far, will not have free will and their coming to life and their existence will have a particular purpose.

So, a billion billions of years will change almost nothing within the oldest energy structures of the universe, and the younger the energies are the greater the changes will be, concerning their improved adjustment to the functioning of the universe. As for the living beings, they will continue with their development regarding the increased number of new species and the advancement of all the species in their development, as well as occasional sudden increases of the development of the chosen species, so that they could assist in the creation of the luminous bodies.

Further pondering on what will happen to the universe after the billion billions of years has no point, but one can surely say that its development will be moving towards the goal it has to reach during the billion billions of years. This, however, does not mean that any big changes

would occur, as they have until now. Their main purpose will be to keep up with the work of the Creator: creating the universe with as many contents as possible.

What was the Creator's idea regarding the purpose of the universe?

His first thought and his last idea regarding the purpose of the universe and the way of its functioning are practically the same. They differ only in minor details. The difference is in the ways of actualizing the ideas during the entire history of the creation of the universe. This will probably be typical of the oncoming period of creating the universe, but deviations will be a lot smaller than they have been so far. The aim the Creator has put in front of himself is the perfect harmony of the functioning of all the elements of the universe in the future with an exceptionally perfect functioning of each of the complex elements. The goal is, therefore, perfection of the contents and their perfect functioning. Once this is reached, it shall never again change, for the universe is endless.

NON-MATERIAL LIVING BEINGS

The limitless vastness of the universe has always attracted human curiosity. However, what is it that people are interested regarding the universe? Also, what is it that they should be interested about and what should they know?

Our goal will be to point out to people what they should know about the universe so that they could develop faster spiritually with the assistance of the holy knowledge. The initial phase of the creation of the universe all until the creation of the first living beings, and especially before the universe was created, called the period of the Potential, should interest people only as mere facts, so that they would know when and how the universe was created. People should really be interested in the period starting from the appearance of the first living beings in the universe. The first living beings, as we said, were non-material in their nature; they were created as energies that had the power to multiply and to only partially adjust to the conditions it existed in, and thus they had the power to partially change.

How were the non-material beings created? They were not created by chance, but after the Creator's wish to make something new through the then already capable energies of Christ and the Holy Spirit. The creation of non-material living beings had already been programmed by the Christ Energy and the Energy of the Holy Spirit, and the very actualization was performed in full accordance with the intention. A special energy from the contents of the Holy Spirit was chosen. This energy could easily change and is very adaptable, and it also had a certain level of intelligence. In order for this energy to function as a living being, it was necessary to give it a certain life-giving program and it had to be constantly supported by a certain energy that contained the program so that the program would not cease to exist. That is why the life-giving energy or the Life Wave was created within the complex Christ energy.

The life-wave was given features that the Christ energy had determined in advance. Its frequency was between 2.6 and 26 Hz. This showed us that the wave changed its frequency constantly within this scope, going steadily up and going back to the initial frequency of 2.6 Hz. In this way it was capable of sending all of the information on various levels of the existing living non-material beings. As it was going through the energy chosen by the Holy Spirit, the life-wave activated the functioning of such energy system that quite resembled the human aura. It developed, gradually established the functions planned by the program of the life-wave, and after a period of development it reached its normal contents and function. This aura is actually a non-material living being that does not consist of the white and gray bioenergy as

with material living beings. It contains functions similar to the ones with material living beings: function of keeping good health, creativity and intelligence, information function and others.

Therefore, one can get a rough image of a non-material being as an aura without a body. However, this aura had the capacity to move like all energies did: very fast, and it could almost instantly be wherever it wanted to. This very feature of non-material living beings was one of their faults. These first living beings were created for a purpose; they had a task. They did not have, in principal, free will. Their program had already been made. Aberration from this program could not be big, i.e. it was within the limits that secured the safety of survival, functioning and multiplication of those living beings. Stepping outside of these boundaries was made impossible by the very program inserted into these living beings.

These non-material beings were programmed to accomplish certain tasks, and so each shifting or going to other spaces in the universe would be the aberration from what Christ Energy had in mind, and that is why their great speed was actually a negative feature. In order to rectify this, their program of life had a feature that defined precisely in what cases and how far they could go from their dwelling.

The development of these beings, after they had been created, was going on with the support of the Life-Wave, which was constantly giving them new impulses of life, supported their development, their multiplying and their changes every time it went through them. Nothing could happen in the lives of these beings that had not been brought into them by the waves of the life-giving energy. Their task was to work on keeping certain energy flows, which, due to their subtlety and small dimensions, could not be dealt with by more serious energy complexes. So, the first tasks of the living beings made by the Creator were small repairs on certain important energy routes.

Such limited tasks could not enable a rapid development of creativity and intelligence, but the very length of time these, let us call them, races of non-material beings, led to a very slow but at the same time high intellectual development. It took a number of billions of years for them to reach a very high level of intelligence. The destiny of most of these super-intelligent non-material beings, i.e. races, was defined by the tasks they had to accomplish. In case certain jobs had to be terminated, a need for their life was also terminated. Either that or they were given certain similar tasks elsewhere, because their adaptability to new conditions was relatively small, or they simply disappeared, due to the Life-Wave and because of the lack of need for their existence.

Many of these non-material beings reached top levels of intelligence and knowledge, thanks to, above all, their longevity. Lives of individual ones, depending on their race, had spans from 2000 to 30000 years. After that period, in coordination with their genetic code, their auras, i.e. their energy body disintegrated and they disappeared. Today one can say that there are billions of them. Out of this number there are about fifty million races that are on the super-intelligence level.

After the first tasks, given by these races, during the further development of the universe, their tasks started changing gradually. They were given more than one task each, and in the last third of the age of the universe, a small number of these beings was given free will and life without concrete tasks that had been thought of in advance. Yet, the number of the races with free will, that do not have a material being, is practically minimal and is but a curiosity in certain parts of the universe. Now, we could ask a question in regards to the level of the deviation from what the Creator has determined to be a constant. Not a single being that did

not have a materialized body with free will, regardless of the race, could deviate from the Creator's will. The lack of free will with the first living beings in the universe was a kind of a security and guarantee to the Creator that some of them would not deviate from the road he destined for them. Later on, due to the increasing demands put in front of these non-material beings that dealt with solving various issues in the universe, they were asked for increased creativity when decisions had to be brought, which were out of the realm of the program given to them. It was thus necessary to give free will certain to races, in certain cases.

It turned out that their efficiency, now that they were given free will, was incomparably higher, especially in the cases that were the responsibility of the Life-Wave. However, not a single one of these races was given absolutely free will. These limitations represented the borderlines and beyond them free will could not be exercised. These issues had to deal with the coordination of the Creator's will. Because those races were developing much faster than the others and were super-intelligent they had no problems with the indisputable authority of the Creator.

Non-material beings are being developed even today, as they most certainly will in the future development of the universe. New races are created to meet the rising needs, and they do not have free will. Other races dissolve and disappear after they have completed their tasks, or after there is no longer need for their existence. Certain races, however, will be given limited free will, because of the particularities of their tasks.

NON-MATERIAL BEINGS AND HUMANS

What are the relations between humans and non-material beings? None of these races has any negative or harmful effects regarding the human race, or any other energy or material race in the universe. That is so because they live in full harmony with the Creator's will. This is the reason why humans are not endangered by a single non-material race existing in the universe. On the contrary, the development of the human civilization could be accelerated if they could use the vast that knowledge that non-material beings have gathered during the billions of years of their gradual development. They are ready to assist at any moment and in any aspect. All one has to do is to contact them.

You have been acquainted and you contacted the race of super-intelligent non-material beings that have no free will. They live some 200 kilometers in the earth's atmosphere. You were given certain basic data on their way of life, existence, and education. They have already given you the primary information and assistance. You only need to continue contacting them, and they will redirect you towards much developed and more important non-material races in the universe. These could be of great assistance to you and the human civilization. You need to do it.

Contacting Non-material Intelligent Living Beings

My first contact with the non-material intelligent beings that live in the earth's atmosphere happened on September 5, 1999. After the appeal I sent in my meditation, wishing to make contact with the collective conscious of this civilization I could see light in the distance. It was oval in shape and it resembled an eye, so my attention was directed towards that. Suddenly, I heard a voice or maybe I was only aware that someone was addressing me:
Ljubisa, you want to contact us so that we could help you with certain issues.
Yes, I am addressing you as a friend and asking for help.
What would you like to know?

First, I would like to find out something about you, if you want to speak about it. We will tell you what you are allowed to know. We are non-material beings, made out of energy. Compared to earthlings we are super-intelligent. We can't do anything negative and destructive. Everything we do is useful for somebody, and it is never to harm another. We live in clusters, a couple of hundreds of us together. There are no genders here. We multiply by generating a segment of our energy with the embryo in it. Out of this, it gradually develops for a couple of days. However, in regards to its intelligence, it only has potentials that have to be developed in special schools. This development goes on for about two years. After this, we become equal members with the rest of the community. We don't have free will, so it may be hard for you sometimes to understand us. Our intelligence was being created for millions of years. That is everything that you need know for the time being.

In what ways can you help me?

Practically in every one. This is so because we can see the present, the past, and the future, and we can change the present in order to change the future if it is not positive.

After I had been given very useful information from them, I wished to thank them in a way, and so I said:

Is there any way I could do something to please you?

No, not in that sense, thank you. But the very fact you addressed us means a lot to us.

Can I speak to you again?

Sure, whenever you want to. We are openhearted and we are your friends. Good-bye.

THE CREATION OF MATERIAL LIVING BEINGS

After he had created the inanimate matter, the Creator came to the conclusion that he should give life to the matter and give it the same capacities that the energy had already been given. That is why living beings represent the combination of the processes of creating the inanimate matter and the process of giving the additional intelligent energy coming from the Holy Spirit, as well as the effects of the life of wave on this creation.

In this way this creation had the density that energies don't have. It also has the possibility to develop its intelligence and all of the elements that the life-wave transferred onto the non-material living beings. In the beginning, the animate matter was in shapes of extremely simple living beings, much simpler than bacteria. For a long time, which can be measured with a fifth of the age of the universe, the animate matter existed on such a primitive level. Then a leap occurred in their development, and it resulted in a very primitive creation, in comparison to the complexity of life forms today. This leap was necessary because status quo had to be retained on one of the planets that represented a very important product in the field of material.

The task of these beings was to prevent the degradation of inanimate matter on this particular planet, which was decomposing to its basic elements that were gaseous in nature. In order to keep the stability of the planet's surface one had to build in the elements that would stop this process and then keep it constantly in such a state. Living beings were ideal for this task, and their remains would make a protective sheath on the planet's surface that would prevent the further decomposing of the planet. In order to do this, the Christ Energy created a special program for these simple microorganisms, and that was the immense leap mentioned above. Regardless of their small size, they had two capacities: extremely fast multiplying by division to a number of parts after a very short period of their creation and a very short life-span that practically ended the moment it was initiated. These microorganisms multiplied extremely fast because they used the abundance of gasses useful to them, and their remains were literally

glued to the surface of the planet thus creating the protective sheath necessary to prevent the degradation of the rocks.

The microorganisms could develop relatively quickly and because of the level of development they could adapt to the new situation on that planet. Relatively soon after these microorganisms had been created, others were made at other parts of the universe. When more complex tasks had to be accomplished, a selection was made, and a mixture of certain organisms, so that new needs could be met. In this way, a large number of microorganisms were created during a long period of time. These microorganisms were becoming larger and larger.

After a long time, during which only living beings that were incomparably simpler than any microorganisms we know today, new, more complex organisms were designed so that they could accomplish certain tasks. Gradually, plants and animals emerged out of these microorganisms. A new task and goal that the new generation of microorganisms had to reach was the only reason for their creation. This, later, led to the gradual expansion of microorganisms and they became plants and animals in the present forms all over the universe. Therefore, in order for the animate material world to develop, changes had to take place within the Life-Wave, since it was creating, activating and keeping the lives of non-material living beings. The altered Life-Wave remained unchanged all until the moment when a need arose for the creation of more complex material living beings, which had to accomplish certain tasks, above all the tasks that had to deal with the maintenance of the inanimate matter. Since then until today, the Life-Wave has been changing gradually, enhancing its contents and ways of acting with the needs of the current material animate world and new elements for the creation of new material living beings. In coordination with the practice until today, the life-wave will change further on, following the needs of the Creator for the new contents within the material living beings.

THE CONNECTIVE ENERGY NUMBER ONE

By creating energies with special characteristics, as well as creating the inanimate and animate matter, the Creator has made the contents of the activities in the universe in such a way that it functions as an immensely complex organism but with all of the various and numerous elements working in perfect synchronicity.

The Creator has designed special energies in order to solve certain special problems, and they can be very interesting to people because their features can be used to solve many of their problems.

One of such energies is the energy that makes contact and keeps it constant between the two global and everlasting energies such as the Christ Energy and Space Energy. As we know, these two energies imbue the entire universe including the auras and bodies of humans. However, due to their different features, these energies can exist at the same place at the same time without having any contacts between themselves. But, these two energies have to be in contact so that they can synchronize certain mutual activities and have full effects in the end. In order to ensure this contact in all possible conditions, the Creator has thought of connective energies that would do this job perfectly well and safe.

One of these energies, let's call it Connective Energy #1, has the following features that may be interesting to people: it enters energy fields of global energies with ease, and establishes good contacts with each one, although their features are quite different. So, this energy has

the capacity to adapt to the energy it chooses and establish such connections with it so that one can almost not notice the transfer from one energy to another.

Its capacity to adapt extremely easy can be used for many purposes:
in order to connect the two energy fields;
to transfer information from one energy center to another;
to transfer one energy into the field of another (which is its main task), as much as the other energy is interested in it.

These three features can be used in many cases so that humans and the earth could be helped, not only for the healing work but in other spheres too. The connective energy can secure the transfer of healing components of some supreme energies of the universe such as the healing component of the Christ Energy, Space Energy and Energy of the Holy Spirit. As each of these energies is super-intelligent and spiritual, the contact with them can be achieved only through an appeal sent by the person of high paranormal capacities. The duration of such a connection can be set to "until the healing of a certain disease is accomplished", and after that level has been reached, it disconnects itself automatically. Continual transfer of a certain element out of the powerful global energies that would be suitable for the curing of a particular disease would not be possible without the Connective Energy #1.

While creating the connective energies, the Creator gave them certain capacities that can be used efficiently for the assistance in the development of the human civilization. You got the gist of the transfer of Christ energy or some other global energy through the Connective Energy #1. It functions continually until the healing takes place, but it works in impulses, at the moment when there is a need for it. The great assistance you can obtain from the connective energy is the transfer of certain energies, above all, the global ones, but other energies, too. Some of these energies are known to humans: heating energy, electric energy, or other energies that can be transferred to the consumer.

The activity of the Connective Energy #1 concerning the transfer of the heating energy is possible in principal, but it does not come from the heating sources such as the sun or some warm inanimate matter or anything else. It is transferred from the global energies within the universe. The heating takes place as it transforms within the global energy, and then the heating energy is transferred through the Connective Energy #1 to the consumer. This way of transferring is very simple, but you do not have the capacity to actualize it yet.

This capacity is very important because it will solve certain problems people have with heating their homes, so it is necessary for us to reestablish a contact after six to nine months, again in meditation, so that you can actualize it yourself.

Concerning the transfer of the electric energy, it is done in an identical way as the heating energy, and you will be given the information about this in six to nine months.

This assisting feature of the Connective Energy #1 can be used on a wider scale, but its actualization is somewhat more complex, and you will be given information in regards to this later on.

These features of the Connective Energy will attract most of attention among people, because they will find it most interesting and because it is the most attractive one to them, although it is only one of many capacities of the Connective Energies, the hierarchy of which is hard to discuss. One of the features of the Connective Energy deals with the transfer of energies from

one energy field to another on a great scale, which can lead to certain global transformation and the humans as well as the earth's aura are interested in it. The ways and realization of these activities of the Connective Energy #1 will be explained to you in the following months when you gain more experience regarding its use.

THE CONNECTIVE ENERGY NUMBER TWO

Starting from the fact that there is a possibility of establishing harmonious relations of all the elements and structures of the universe, the Creator has been gradually building connective energies, which took care that this harmony takes place. Today this harmony is practically established all around the universe.

Apart from the Connective Energy #1, the Connective Energy #2 can also be interesting to humans. Its numeration has nothing to do with their importance or the order of importance, with when each was created, or with any other sort of hierarchy. It is simply the order in which these connective energies will be presented to humans.

The Connective Energy #2 differs from #1 in many aspects. It is not tied to one spot as number one, but is constantly moving through the universe searching for calls and needs of certain energies which want to make firmest possible contacts with some other energy structure. There are many such cases in the universe if we take into consideration the fact that weakening and breaking of connections with certain energies occurs due to the immense dimensions of the energy structures.

This is why these wandering connective energies are of great importance - they lead to the connection between the separated energies in a relatively quick and efficient way wherever they may be in the universe. However, this energy is very important for humans because it can establish a connection among persons willing to develop and harmonize their way with the Creator's will. These energies deal with that function by answering to the appeal of a human with exceptionally high paranormal powers and go to search for kindred souls of people who also want to advance. In the same way it answers the call of the energies to find contacts, the Connective energy #2 will find persons who have sent the same appeal as others, and thus it will create a network of like-minded people who share opinions on the development of individuals and of human civilization in general.

The person who sends the appeal will influence the way people of similar aspirations and aims think, although their development capacities are smaller. That is why the person who sends the appeal has a great responsibility and honor to convey his views on the development of the human civilization, his way of thinking to a large number of like-minded people who will follow him. This is a great responsibility also because that person has to undertake everything that is in his power, his way of life and work, to be as near as possible to the Creator's way. The number of people included in this network without knowing it will reach tens of thousands even after the first appeal to the Connective Energy #2. By repeating the appeal, other people will join, because being near to some of the connected will influence the awakening and activating of the correct way of thinking with the people that had not been connected after the first appeal. The appeal engulfs the entire planet and makes no differences regarding the gender, race, religion, and other issues. Those people will not know about their connection with your conscious, but they will very soon and with great pleasure accept everything they find, hear, and read about you, be it your products, books, articles or any of your public appearances.

A month after your first appeal you have to send another appeal and do so every month. This is the new capacity that has not been used among people for the increase of the number of people who will follow the Creator's path and thus speed up on their way towards the Great Goal.

THE CONNECTIVE ENERGY NUMBER THREE

By establishing good contacts, connections and control of these connections from within, among the energies around the universe, the Creator has practically foreseen all of the possible ways of deviation from the normal functioning. Yet, the deviations do occur, and considering the vastness of the universe, there are many of them. They are different in nature and that is why it is impossible to affect them by a simple spiritual energy. It is the only reason why the luminous bodies, the maintenance workers of the universe, have to have the knowledge of the universe that helps them solve each problem that occurs in the universe. However, there are certain movements and vibrations along the universe that represent a sort of a spinal column of the universe. They pass by and imbue with all the energies that are on their way and are in this manner the main highway or connection among a very large number of energies. This road goes through the central part of the universe and resembles a stripe, a highway that winds. This highway is very wide, yet it is of modest dimensions when compared to the infinity of the universe. Parallel with it, two to three other stripes, not so wide, go through the universe and have special tasks. This spine of the universe is the Connective Energy #3. This number has nothing to do with the hierarchy or importance of these energies. It is only the line of the connective energies that we introduce you to. The Connective Energy #3 is a very subtle information channel. We use this channel to follow the complete functioning of almost all the energies in the universe. The Connective Energy #3 is a means that only the Unique Field and the Creator himself use to find out momentarily what the functioning and the state of the universe is like.

This energy is interesting to the people because of its subtle mechanism of conveying the finest bits of information. That is why this energy is appropriate for the reception of information more than any other spiritual energy in the universe.

In order to use this channel, one has definitely to have high paranormal powers and to wish for the contact with this and that energy structure, with certain fields at places of power, even with certain mature luminous bodies. This means that the connections you have had so far with some of these energies, have improved a lot, are more subtle, gained in contents, precision and importance.

The contact is established practically instantaneously under the condition that the spiritual energy in question does want to contact you. By using the Connective Energy #3, as time goes by, you will expand, develop, bring to perfection, and use the capacities of contacting spiritual energies of all kinds to the maximum.

THE DEFINITIVE SYNCHRONIZING OF THE OPERATIONS IN THE UNIVERSE

After he had developed his ideas the Creator gradually completed the functioning of certain parts and in the end the functioning of the entire universe. One of the main breaking points in the universe happened at half of its present age, when the Creator decided to connect the activities of global energies in the universe (for humans the most important are the Christ Energy, Energy of Space and of the Holy Spirit) with certain specific energies that were active,

scattered all around the universe and that achieved tasks in regards to various special functions connected to that specific area. By connecting their functions with the global energies, a global system of functioning of the universe started operating. Its advantage in comparison to the previous period was that everything was taking place almost completely under the control of the global energies within the entire universe. In this way numerous problems were avoided, as well as the partial operations of certain parts of the universe, which were the consequence of the autonomous work of special energies within. These occurred occasionally due to specific new situations these energies encountered. We have also avoided the aberrations of certain regions from the functioning of the rest of the universe. That is why one can say that half way into the age of the universe the definitive synchronicity of operations within the universe occurred.

With the development for the creation of luminous bodies, further maintenance of normal functioning in the universe has been ensured all until this day.

THE INDEPENDENT DEVELOPMENT OF THE UNIVERSE

The Creator has never had a wish to create a universe that will function as clockwork, as a robot that would constantly perform repetitive operations, same achievements. On the contrary, the Creator has from the first day of his work on the creation of the universe tended it as one would tend something that grows, that later on has to take over not only its own development but its functioning into its own hands. This means that the Creator had expected the universe he was creating to be able to take his destiny into its own hands and deal with its own development in the positive direction. And it did happen this way. After one third of the age of the universe it began with its really serious, independent development that shall never stop and will never cease being creative.

At all this, everything that is happening within the universe will constantly reflect only the Creator's will. In this way the Creator has managed a double development: the initial one that is started from his wish to develop and create the universe, and the secondary one that comes out of the creative development of the universe itself. Since the Creator's desires in this aspect have no temporal limitations and limitations of the contents, this means that the development of the universe will go on forever and will never stop. It will change gradually as time goes by, and it will have more creative contents, better synchronization among different contents and will grow continually, increase, multiply the intelligent and super-intelligent energies that come out of such a development of the universe.

Together with the changes of energies that make up the most of the contents within the universe, the matter will change, its structure, its features, in the same manner the changes of energies in the universe will lead to the changes in the living beings. They will develop in coordination with the development of energies. Within the period of the activities of one sort of energies, the living species will develop in coordination with the adjustment to their environment. Certain species that have been seen to cooperate in the creation of the luminous bodies will develop exceptionally fast in comparison to other species from the same region. This is so due to the need and necessity for the enhanced creation of new capacities of mature luminous bodies.

HOW TO IMAGINE THE UNIVERSE

A man can imagine the universe as a continuous stretching of various energies, which, if we think of it in two dimensions, look like patches of various irregular shapes that are placed one

upon the other and partially cover each other, going all the way to infinity. A three-dimensional picture is somewhat different. It would resemble an endless sea, where, beside the basic waters, you would have water of different colors, hues, densities, which are also spread across the endless sea, and within them there are numerous smaller and bigger ponds of different colors, features and shapes. Here and there you can see a random black dot – matter. Yet, it is hardest to imagine that there are other kinds of liquid that can be found in the ponds or the sea and that each of them keeps all the features and that no mixing or dilution takes place; no changes. At the same time in this abundance of shapes, colors and features one can notice a slow movement of the shapes in different directions. In addition, there is a gradual distancing of certain shapes from one another, and their coming closer to others. Certain groups of different liquids move together in the same direction. This three-dimensional picture, observed through a long period seems like a multi-colored carousel turning in various directions.

What are, however, the movements of individual, let us call them liquids, that take place in the short period of time, that are fast, and change their positions according to some planned program? Those programs can be constant and plain through the time, while other occur occasionally or can occur only once for special reasons. These liquids, as we have presented different energies within the universe, move without a sound along their endless paths. This is the walking or rhythm of the universe. Its deviations from the program are almost unimportant and we shall not take them into consideration. By moving, breathing, the energies of the universe do not go through some senseless ritual, but enable the functioning of the universe, development of each individual energy, and the development of the entire universe. This silent walk creates a new universe day in day out.

ARE THERE DESTRUCTIVE ENERGIES WITHIN THE UNIVERSE?

The universe has never been a battlefield of any clashes of the energies, clashes of different forces. It has never been a space where destructive forces existed. As in the case of the devil, all of the images people have of such destructive forces are simply a figment of their imagination; a reflection of their negative thoughts and feelings. As the Creator has made all of the energies in the universe with the built-in programs of their contents, development and activities, one can not even imagine that any of them could be destructive. Of course, as in other cases, it is possible that two energies contact each other and that the contact results in the creation of the third energy, or dense energy i.e. matter. This is a natural process that humans have been acquainted in chemistry and it has no evil intentions within, or destructive ideas and thoughts. People must realize this in order to remove the fear from negative, destructive and harmful energies in the universe forever, because the universe is the Creator's work, and he can't do anything harmful or destructive.

THE NEW ELEMENTS IN THE UNIVERSE

By changing the contents of the energies in the universe during his endless life, the Creator has gradually harmonized these energies with the new elements that appeared in the universe. Not a single element that appeared could survive on its own, because it was a new tissue in the perfect organism. That is why it was necessary to change the contents of most of the energies with each new energy that appeared in the universe. Especially the all-imbuing and most important energies had to go through such changes, so that the synchronization of the universe would continue after the new element had been inserted. Such changes were necessary in the contents of the work of the Christ Energy and the Energy of the Holy Spirit, so that living matter or living beings could be introduced and followed. The Life-Wave, which

had until then followed and maintained non-material living beings, was the one that went through extensive changes so that it could breathe life into living material beings and give them the capacities to grow, multiply and adjust to new conditions and gradual changes. One didn't stop there, because the Life-Wave has had to change its contents and functions a number of times since the first living beings came to life until this day, so that he could adapt them or enable them for the creation and maintenance of more and more complex material living beings in the universe. There are numerous new elements, such as the material living beings in the universe, and that is why the Creator is forced to constantly change and adapt the contents of numerous energies. He especially has to pay attention to the global energies, so that they could work in perfect harmony with each other under the given conditions.

THE INAPPROPRIATE CONTACTS WITH THE UNIVERSE

The order in the universe is precisely defined and it operates in a predictive manner. However, certain elements that deal in one or another way with humans or at least with their thoughts are interesting to humans. Physicists, astronomers, and some other scientists are all ears, so that they could hear the answer from the universe; the answer to the signals they sent into it. They are expecting to receive a reply from at least one civilization that is approximately on human level of development so that they could confirm the existence of at least one intelligent species in the universe apart from human. This activity seems ridiculous and pointless to all but, of course, humans. There are a couple of millions of material civilizations whose development is at least on human level, and there are hundreds of thousands of material civilizations that can be called super-intelligent. One has, however, to admit that material beings are quite rare in this part of the universe. This tells us about the vastness of the universe and that the Solar system is a small, unimportant particle of the universe, and that makes human opinion of themselves that they are the center of the universal civilization paradoxical. People will have great difficulties contacting other civilizations in this way for a number of reasons:

As a rule these civilizations are not interested in this sort of contact.

The way of sending the signals is wrong, so they will not reach far enough.

It will be clear to the civilizations on a high level of development, that could distinguish the weak and unclear signals that they are sent by an insufficiently developed, aggressive civilization that will not attract them and make them interested in replying to them.

This sort of contact with these civilizations will be achieved in an incomparably simpler way with the assistance of spiritual energies. The choice of a civilization that is to receive the signal will not be defined by the capacity of receiving the signal and its deciphering, their distance from the Earth, but by the chance to receive assistance and support in the positive development of the human civilization. The point is not to be directed towards the material effects, but towards harmonizing human thoughts with the Creator's will. In the forthcoming period, you will have the opportunity to achieve such contacts with our assistance. They will give you plenty of very useful ideas for the human development. As always, considering their free will, the humans are to decide whether they will accept it or not.

THE ASSISTANCE FROM THE UNIVERSE

Big global cosmic energies, as well as many other smaller ones, special, occasional and particular energies hold within the knowledge and capacities that could be used for the development of humanity and advancement of the human civilization. However, one can not reach this knowledge and these powers through research in the field of material. They can be reached only through research work that deals with the paranormal world, the world of

energies unbeknownst to humans – spiritual and other energies. They are ready to give humans all of the knowledge and powers any man can take over and actualize. That is where the basic problem of human development is. The humanity has directed itself towards the field of material, and it is losing its way in the cul-de-sac of the research. The research of the paranormal is completely neglected, especially in the West, and it is waiting in vain for the people who will be dealing with them. The basic problem is that one has to be on a high paranormal level in order to take over the knowledge and powers. Unfortunately, one reaches it slowly, in most part after a long period of research.

You are one of very rare people who have completely devoted himself to this field. You are a rare chance that we can use and convey our assistance to humans because of your nimble and easy contact with spiritual and other energies, your total dedication to finding, gaining and applying the knowledge and powers that will help the humanity so that they can strengthen their health and other developmental capacities. That is why you have to understand how important the mission that we want to actualize through you is, and how important it is for you to put aside your daily human chores and dedicate yourself fully to this holy mission. We will continue with the conveying of the knowledge and powers that you will, considering your level of development, be able to apply for the good of humanity. Besides, you will be given exceptionally important knowledge connected not only to the functioning of the universe, but also to the functioning of certain energies, dead matter and living beings. In order to actualize this, you have to receive information twice a day, whenever you have a day off.

THE SPACE ENERGY

The third global energy important to humans is the Space Energy. This is a very complex energy that consists of one sort of energy, but its activity is specially adjusted to each part of the universe, addressing the needs of such and such space. This also applies to the planet Earth and the space around the human body and its aura as well as for the space within the auras and bodies of humans. The Space Energy multiplies and strengthens the processes that work in harmony with a positive direction, positive wish. This means that the Space Energy can be involved in the healing field if you attach the part connected to the Space Energy activity to a healing session.

In this way the effects of your healing sessions will be multiplied from 5 to 20 times, depending on the healing energy you use. So for example the effect that the activity of the Pagoda Roof* will be multiplied seven times, while the effect of the Beehive* will be increased seventeen times. This way of assistance, given by the Space Energy, can be used with every session you choose. What is more, the programming of your products can be fortified by including the Space energy into the program. The effects of your products, solid, liquid and pills will in this way be multiplied and from the moment you start using the assistance of the Space Energy, you will be given the powerful increase in the effectiveness that you can call 'Talisman Plus', 'Optimizer Plus' etc.

THE FLASH ENERGY

The limitless universe, the vastness of which people can't even imagine, still functions like a well synchronized super-intelligent mechanism. Only when you take into consideration its vastness and the endless number of energies with as many functions they deal with no

deviation from the programs within the universe, one can see the limitless capacities of the Creator who has designed such a miracle. The deviations that occur here and there at the present moment in the development of the universe may be neglected, yet the Creator removes them with various means among which we include the mature luminous bodies. This is done because he has learned the lesson from the beginning of the creation of the universe – so that no aberration should develop up to the point when it can not endanger normal behavior of the tiniest bit in the universe.

One of the most frequently used energies for keeping the normal functioning of the universe as it is, is the energy that makes its way into the space of the energy field that deviates from the normal behavior. It is in a shape of a streak, or a beam shaped like an arrow, or a beam with a sharp tip that can pierce the wrong-doing energy field. At the same time it sucks in the suitable energy power and contents that is transferred into the energy field and thus corrects gradually its contents and its behavior. This beam draws its energy from the global energies that are all around us, even at the place where this beam is active, by taking over the necessary powers and knowledge necessary for the recovery of energy fields that have deviated from their normal functioning. The global energies it used are above all the Space Energy, Christ Energy and the Energy of the Holy Spirit. This last energy gives it its basic energy power, and Christ Energy creates a program of the recovery of the damaged energy field, while the Space Energy multiplies the effects of this mutual action. The energy used to repair the energy fields can be called 'Flash Energy' is the most wide spread energy in the universe used for this purpose. It is super-intelligent, super-conducting and it fits perfectly into the structure of every energy field it has to repair.

It can be used to help people if you send an appeal that will lead it to the ailing organ or the patient's aura, and it will do what you asked it for in the appeal.

Its effects are very positive and there is no healing method, that you have been introduced to, that can be compared to it. This is so, because the Flash Energy, by its nature, draws all the necessary things from the energies of Christ and the Holy Spirit so that a certain process of energy changes would be realized. Its effects will be very mild and without unpleasant reactions. The Flash Energy is given only once and it will automatically go on working until the healing of a certain disease occurs. It can be used with great effectiveness even with the malignant diseases.

THE ENERGY OF THE FAN

Starting from the general idea of conceiving the universe the Creator has designed a line of auxiliary energies without which the functioning of the universe would be impossible. So far we have named the connective energies, and the Flash Energy. Let us mention a special sort of energy that is called the Energy of the Fan. This energy is most often found at the joining point of three or more energy fields. Such knots withholding a number of energy fields enable their normal functioning regardless of whether they are inside the very space of certain energy or at different characteristic points. This asks for an outstandingly complex system of a super-intelligent energy that functions constantly and keeps the distance among the energy fields. At the same time it establishes contacts among them and it does not allow the system to collapse at these 'tender' points. The fan functions in a way that can not be understood by humans except in the basic outlines.

However, the Fan system is rich with many variations and some of them can be of much use to the development of the human civilization. Namely, the Fan system can lead to significant

changes in weather conditions, it can prevent the occurrence of storms, hail, big snowfalls, and rain. Apart from this, it can initiate the movements of warm or cold air currents that will remove the problems that affect certain regions on earth. Therefore, the Energy of the Fan leads to the removal of cataclysmic weather conditions and it regulates short-term weather changes. Its goal is to remove the negative meteorological conditions and stabilize the weather to be most appropriate to the needs of the farmers and their crops.

The biggest region this appeal can be applied to is 20 kilometers in diameter. It is advisable to appeal the energy after the announcement of a storm coming, or at the time of the storm. As a rule, the weather condition will stabilize around half an hour after the appeal was sent.

THE CONNECTIVE ENERGY NUMBER FOUR

At the beginning of the last fifth of the age of the universe, certain changes occurred that significantly improved the contents of the work and richness of forms of life in the universe. Namely, at that time the Creator was actualizing his wish to weave threads through the energies in the universe. These threads would stretch across the entire universe, and thus they interconnected all of the cosmic energies. Their task was to convey wishes of individual energy fields for cooperation with other energies for researching and finding new contents that would improve the work and life of the universe. The energy threads that go through the entire universe like long hair are responsible for the actualization of many capacities intended for a perfect operation, as well as the functioning of the universal energies. What is especially important is their contribution to the establishing of contacts and cooperation among the energy fields that were very far away from each other and that would never be in touch with some other energy. The very actualization of this is not conveyed through this network but via the special energy waves and vibrations from one energy to another. In this way they have opened a wide field of cooperation of all the energies with each other in the universe, which led to limitless possibilities of development. This, we can call it Connective Energy #4 can play a very important role in the development of the human civilization. Through this energy one can come to new ideas, or solutions to certain problems that the human civilization meets with. The assistance will come from any part of the universe with a certain energy field that can solve or assist in the solution of a problem.

After the contact was made, the adequate super-intelligent energy will give the adequate advice and point to the ways and possibilities of solving certain problems.

THE UNIVERSE IS THE EXTENDED CONTENTS OF THE CREATOR

Almost each paragraph starts with the words "the Creator", because he is the basic source, the essence, the contents and the development of the universe. That is why nothing in the universe can be without the Creator and nothing in the universe happens without the Creator wishing for it. That is why one can say that the universe is the extended contents of the Creator that keeps on developing and yet staying the part of him. This fact does not prevent any of the parts of the universe, starting from the global all-imbuing energies, through different energy structures that are not so significant, from developing according to the program given by the Creator.

However, each of them actualizes its own development due to the built-in program that enables them to survive, but also to develop, make contacts with other energies and matter, and create new contents out of these contacts. The aim of the new contents is to develop a more complex, subtle and creative functioning. This means that energies have absolute

freedom and full creativity in actualizing their development regardless of the fact that this development is directed by the Creator.

TEARING DOWN THE WALL OF PREJUDICE

The vastness of the universe is ever so incomprehensible to people because of its dimensions. Its contents make it even less comprehensible, because they are not similar to anything that has been developed by the human civilization; anything that exists here, even in the most rudimentary shape; anything that would remind the humans of something familiar and something that they could understand. That is why it is very difficult for the people to understand and accept the existence of such a perfect mechanism, even if they were given detailed explanation about the basic contents and functions of the universe. People can have problems grasping the true motif of the existence and functioning of this perfect mechanism that consists mostly of intelligent and super-intelligent energies. Regardless to that, introducing people to the basics of the universe, which we are presenting to you, will eradicate the misconceptions about the origins, causes, and contents and functioning of the universe. This introduction will also eradicate the misconceptions concerning energies and matter and their importance for the structure and functioning of the universe.

The most important issue of all is maybe introducing people to the role and importance of luminous bodies that deal with the maintenance of the normal functioning of the universe. The importance regarding the humans is there because they have been given a very significant place in the development of the luminous bodies. Although we have spoken at length about the luminous bodies, their mission and the mission of the human civilization in their creation, especially in connection to the places of power, people will only now understand the right place and role of the luminous bodies, as well as the place and role of the human civilization and their way of development.

Whether a significant segment of the humanity will accept the holy knowledge at all, and to what extent, will depend on how well you, your sons, and later on some other persons will be able to introduce the knowledge to them and harmonize their thoughts with the creator's will. Now you understand your place in introducing people to the Holy Knowledge. Without your work, your sons' work and work of other people who will come after you, it will not be possible to actualize timely and properly the holy mission of people – maturing of luminous bodies.

THE LIGHT WAVE

The infinite universe may seem like a pulsating egg to an observer who is looking at it from the outside. This egg has no shell; it is semi-transparent with capillary network inside, and it has dark and bright spots. It has dark bits that give place to transparent ones, while at the tip of the egg one may see something like light that occasionally passes through the entire contents of the egg thus illuminating it, and when it reaches the other end of the egg it would disappear. The light that is emitted in equal intervals is the only direct contact of the Creator with the energies in the universe, which he has created himself. The light that goes almost instantly from one end of the universe to another gives the Creator a global insight into the contents and the functioning of the universe. The Creator introduced the emission of this energy wave around one third into the age of the universe, right after the first cosmic cataclysms, so that he could have an instantaneous insight into the state of the universe and thus avoid the dangers threatening to destroy the entire universe. From then on until today, this wave, like a peaceful lighthouse, has been touching each particle of energies in the universe at regular intervals and sends the Creator a true picture on the contents and

functioning of the universe. Based on this wave, the Christ Energy has created and started emitting the Life Wave that also enables the creation and development of the living beings in the universe as well as the insight into their state and problems they are faced with. In this way the Christ Energy can react timely to the problems that can affect billions of life-forms around the universe.

THE ASPECTS OF HOW THE ENERGY FIELDS SPREAD

The energies in the universe gradually actualize their steps in different directions and ways and they reach different distances and return to the same spot in different intervals, similar to the circles planets make around the sun. Such a pace is a part of their function, because the function could not actualize if the energy fields were static. By moving gradually and repeating its function, the energy fields actualize their effects on a much greater span of areas than if they stayed in one place. Starting from the fact that there are stationary energy fields that engulf only one part of universe, and also the global energy fields that engulf the entire universe, which are, actually, stationary, we can say that those are the three aspects of spreading of the energy fields or their functioning. Therefore, regardless of the fact that the fields can have their own emissions that can go in cycles, they can also be:

stationary, encircling only a segment of the universe;

global stationary, since they encircle the entire universe;

mobile, which encircle certain parts of the universe, even big parts at that, which move constantly and repeat their function.

The most important for the normal functioning of the universe are the three global energies that are the most significant for the people. The total of the global energies is seven, but the remaining four are in no aspect important for the people. The energies of Christ, Holy Spirit, and Space give the meaning to the contents and functioning of the universe. Without them the universe would be like a human body without the spine and bones, without the blood stream and without the nervous system. That is why we are going to introduce the three global energies in detail, and people will be capable of seeing the contents and functioning of the universe, also in detail.

THE UNIVERSE IS THE BUNDLE OF ENERGIES

Energies that spread along the endless spaces of the universe are distributed according to the special schedule, which roughly reminds of a tree trunk with branches emerging out of it – to the right, to the left, forward, backward, alternating, dry and leafless. This schedule continues once the treetop is reached: the trunk again, then branching and the same cycle again, until the end of the universe. There are very many such cycles, they cross each others' paths, intertwine, go through the center of the universe, emerge at its outskirts, creating an enormous bundle similar to an egg-shaped ball of wool. These circles represent the phases in the development of the universe, exactly as the creator was making the energies, from the very beginning. Its smallest circle was his first work done, the next one that was mixed with it was his second piece of work, then a couple of them within the same dimension, then the ellipses came that were somewhat larger, a number of them at the same level, then a number of them on the following level but bigger and so on. The universe created in such a way is an extremely solid energy construction that can not sift away, that can not dissolve, change its directions and their position and its way of functioning. The universe is in a way a bundle of energies distributed according to a certain idea, a certain conception and contents of their work. This bundle is another one in a line of connections according to its origin, contents and functions of energies in the universe and is another connection that speaks about their unique

origins, and which, among other things, explains how it is possible to achieve the synchronization of numerous energies in the limitless space of the universe.

THE STATIONERY ENERGY FIELD

The time the first living beings in the universe was created overlaps with the time when the universe was given another dimension that can be reflected in its function to embellish the area it is in. This means that the energies created during the first fifth of the age of the universe started to act upon the very space they came from. All until then this space was completely empty, with no matter and no energies. Since then, thanks to the Creator's wish, the entire universe was filled with the energies has started emitting waves and vibrations into the free, non material and non-energized space and gave it life, contents and function. From then on, the vibrations of the space have been constantly present all around the universe. They have gradually changed because they made their contents and functioning more complex. The function and the contents of the space represent an energy vibration or energy field that spreads all around the universe, that mildly vibrates emitting in its midst the waves, whose function is to support the energies within the space. The energies are, to make it simpler, wrapped in these vibrations of the space, which can be found in and around the energy fields – therefore, they are wrapped and imbued by them. People can't understand the activity of this stationary energy field, but they need only to know that it is about an energy field that supports and eases the existence and dwelling of energies and energy fields within the entire universe.

This energy can be used to help people by enhancing its function at certain places, and the supporting of certain energy states or energies of use to humans can be improved a lot. In order to achieve this, one has to have great paranormal powers that can multiply the effect of this stationary energy field that is all around us and within us.

THE ENERGY SOURCES OF CREATIVE ENERGIES

The Creator's energy is the core, the essence and function of the universe, but all of the energies have been created as a consequence of his creative work, and then the creative work of the Unique Field. They have been programmed to create themselves and design their own contents of work. Gradually spreading in this way, the creativity of the Creator has gained the enormous size suitable to the enormity of the universal space.

However, in the last fifth of the existence of the universe, there have been more creative achievements that had not existed until then. Namely, the great global energies achieved a great interaction and understanding during that period, and it immensely increased their mutual function. This led to the creation of special energy activities that created mutual products generated at places of the mutual creative activities of the great global energies. Their creations are energy waves that come out of the sources of their mutual activities and go into the universe. Their contents and function are a very powerful, super-intelligent, creative vibration that solves many problems along the universe simply by passing by the critical area. Their super-intelligent activity reminds up to a point to the activities of luminous bodies, because of their high intelligence and great energy capacities. They, however, can not replace the maintenance workers of the universe because their activities are permanent, successive; they repeat in regular intervals and can not be adjusted to the changes of situations in the universe. They are a general correction of the deviations of energies within the universe from their supposed programs.

The new power, which you were given from the luminous body of Nikola Tesla, is the example of how these energies work, directed from their source towards the concentration of harmful energies within the earth's atmosphere. These harmful energies are the consequence of negative thoughts of people within the past one hundred years. This vibration is powerful and super-intelligent enough to continue with the present pace of destroying these harmful energies.

The importance of creative energies

A man will never going to grasp many processes that take place in the universe, nor will he understand the contents of individual energies and their functions. It will remain a secret forever. However, it has little or no importance to their civilization development in the directions intended for them by the Creator – the maturing of human luminous bodies. That is why this book of yours will be dealing only with the basic knowledge that people can understand and that are necessary for the faster human spiritual development.

One of the basic elements that people should base their elementary knowledge regards a very complex and important effect of the three global energies in the universe on the contents and functioning of the entire universe. These energies, that cover the entire universe practically give the meaning, tone and pace not only to the functioning and development of the universe in the future. Together with the remaining four global energies that are unimportant to humans are the spine of the functioning and contents of the universe today and in the future. They are, of course, the most important to the development of the human civilization, because people can be assisted in a line of activities, both to their spiritual development and healing, and for some problems of energies known to people, even to certain material problems. We have already mentioned their exceptionally important and efficient activities through: the healing Flash Energy, multiplying activity of the energy of Space, transferring the healing elements of the Christ and other global energies through the Connective Energy #1, the capacity to actualize the heating and electric energies straight from the global cosmic energies, affecting the harmonizing of one's thoughts with the Creator's path as the Supreme Power, the power that is actualized by drawing the circle around human settlements as well as other powers that you will be given during this process of transferring the holy knowledge to you. You will also be given the power to materialize certain products that humans will be interested in, the ones that regard the harmonizing and changing of the climatic conditions, stabilizing and protection of the planet Earth from being destroyed, as well as other capacities that will be given to you during this presentation of the Holy Knowledge through the initiation of by the simple transfer of knowledge. You will be able to actualize it instantly, because of your high paranormal level, and you will be able to assist the human civilization to develop in accordance with the Creator's will.

The assistance from the Energy Sources

Even with the entire Creator's efforts, the period that we can call the first fifth of the life of the universe, still produced some faults. There were certain deviations from the programs that were supposed to be actualized, and there were different contacts of energies that ended by the creation of the third, unwanted unnecessary energies. By doing so, they have done harm both the contents and functions of these energy fields. The Creator has gradually, one by one, solved these problems. Through the endless history of the universe, numerous problems have been solved, and today we can say that the universe functions almost perfectly synchronized. The minor aberrations from the ideal are successfully controlled by the vibrations that ejecting great global energies from their mutual sources, while the luminous bodies remove special non-routine situations that ask for special solutions at various places and at various times.

These great or global or creative energies that imbue the entire universe are specially characterized by their Energy Sources that can be super-intelligent and exceptional capacities, immense power, but their problem is that they act routinely, removing, one by one, the basic, most common problems that occur in the universe.

However, these Energy sources of creative energies can still be directed onto the concrete cases both because of their position and time, and because of the contents of the problems that need to be solved. They are very important for the people because they can assist both the individuals and the human race.

In what ways can they help?

Above all, these energy sources of creative energies can be used in the following way: They can direct a certain number of sources towards the solution of concrete problems, for example, healing an illness, cleansing auras, solving people's problems, after the desire or appeal of the person with high paranormal power. Other ways of assistance deal with the directing a certain number of people towards the Creator's path, changes in the climate, thickening of the ozone layer and solution to different material problems that burden the human civilization.

Energy sources of creative energies are very efficient with healing certain organs. Changes in the auras and their cleansing happens very fast, cleansing of blood vessels that supplies the affected organ with blood, normalizing of the function of the organ and cleansing the blood vessels that supply the central nervous system with blood. So, the circle closes as in the case of the Flash Energy that independently closes the cycle and constantly repeats it until the complete recovery of the organs.

THE DIAGNOSTIC ENERGY CENTERS OF THE UNIVERSE

There are certain places in the universe that perform certain functions and that deal with practically all of the energies in the universe. These places are filled with special energies that are very selective and that can copy any program, any energy in the universe. Their task is to check the energy fields, according to a certain order or upon an appeal, in order to find the deviations of certain places from the programs supposed for such and such energies. By finding the places that deviate from the programs given to them by the Creator, these energies summon the luminous bodies to make corrections and bring those places into their normal states. These energies diagnose the energy fields from a distance, by marking the affected places and then the luminous bodies find them and affect them.

There are three centers with these energies within:
the center for special and particular energies;
the center for most medium and small energies;
the center for only 7 global cosmic energies.

These centers, we can call them Diagnostic Energy Centers play a very important role in the timely detection of deviations in the work and functioning of the energies within the universe. Luminous bodies would find it difficult, if not impossible, to accomplish the tasks given by the Creator without their diagnostics.

THE APPROXIMATELY INFINITE NUMBER OF ENERGIES IN THE UNIVERSE

The appearance of different energies with their particular programs and functions within the framework of the universe represents a very complex and extensive creative work of the Creator. It has been there during the entire existence of the universe. These energies are, apart from the global energies, the essence of the functioning of the universe. Without them the global energies would not be capable of offering such contents and such limitless abundance of functions the present universe contains.

The number of the medium-important, special energies nears infinity. One can imagine the amount of creative work necessary to think of the function of some energy within the entire function of the universe, and then think of its program, its place, intensity, way of functioning and enable its synchronicity with other energies in such a way that none of the infinitely many energies does not react in any way that would disturb the activities of the new energy.

This immense work is almost incomprehensible for the human spirit because of its complexity, ampleness, and particularity. That is why one has to realize the immensity of creative work necessary for its establishing and then the constant checking of functioning of such an energy whenever we meet some new energy, of medium importance or even of little importance for the overall functioning of the universe. The work was also immense in checking the functioning of such an energy, which was the last step in adapting to the existing extensive number of energies in the universe.

THE STRIPE ENERGY

Apart from the big, global, creative energies, the importance of which in the universe is undoubtedly the biggest, there is a world of medium and less important energies in the universe, each one has its particular role. They can assist people to a great extent in the development of the human civilization. One of these energies spreads in a shape of stripes along the universe and is one of rare energies that is separated into strips that go into the depth of the universe. These strips are separate from one another, and yet they are an identical energy structure and they have the identical function. Their task is to protect all of the energies big, medium, and small, from the cosmic pollutants. These pollutants consist of small or very small streaks of energies that detach naturally from certain energy fields and wander the universe contacting in different ways various energies of the universe. They, in a way, pollute a completely pure environment where these energies are active, similar to pollutants in the human environment. These pollutants, depending on their size and results of contacts with the energies of these spaces, often leave spots, traces, as a consequence of joining the energies at such and such place. This, at the same time, is a place without the basic energy, and often they contain some sort of energy that, together with the basic one, produces new items, thus continuing with the destruction of the basic energy.

The stripe energy field creates a network that in a way cuts off the energy smog, stops it and neutralizes it when in contact with it, regardless of the sort of energy. This smog can only move within limits of the network of the stripe energies that will neutralize it. Yet, the density of the stripes is not so big so it can neutralize and disable all of the particles of smog going through the universe. A great deal of this work is done by the luminous bodies, which neutralize these energy particles that wander around certain zones that are protected by the stripe fields.

The stripe energy can be used for the protection of people from the gassy harmful components and components containing small particles. Because of the super-intelligent structure of the stripe fields, they can perfectly protect humans from smog and other pollutants while at the same time they let in all of the components of the air that are useful or neutral to humans.

You have reached the level of development where you can create a product that would function on the basis of the stripe energy, be it for the protection of one person or the protection of bigger spaces that would protect a number of people.

These protectors are everlasting, they will never stop working. Their effects will increase with the rise of your paranormal capacities. The protector acts instantaneously, causes no reactions and a person feels after a couple of minutes as if one is in places where good quality air can be breathed in – mountains or far-away islands in the ocean.

THE CREATOR CHANGES, TOO

The initial phase of creating the universe was the transfer from the Potential to the creative time for the Creator. However, there were certain changes within the very Potential, because of the gap in it that showed up after the creative development had taken place. Instead of the part of the Potential used up for the creative development, creative contents filled in the space. This means that there were changes in the potential-creative segment and that threads of a creative genius appeared within the old potential contents. These threads were becoming more important and denser with the development of the creative segment and with the creation of the universe.

Big changes occurred in this way, during the creation of the universe; very big changes happened in the very Potential, since it was becoming more and more creative and less and less potential in regards to its contents. Only the core of the Potential remained untouched and it is even today the untouched potential segment of the Creator that no energies that could disturb its contents can enter. A big part of the universe, almost one third, is made out of this potential segment of the Creator, that practically does not mix with the rest of the universe and it will probably remain so forever.

Opposed to this, there is a reversible process: the creation of the potentials, i.e. potential capacities inside the Unique Field and big global energies of the universe started during the last third of the age of the universe. A need arose for the creation of special cores of the potentials, because of the enormous complexity and enormous capacities for the spiritual development. These cores would be used when solving certain problems that may be put in front of these energies in the future. Of course, the capacities of such potential energies are ever so smaller than the capacities of the Creator. However, they represent the spark of independence of big global energies that could be of help in the future with the solving of certain major problems that could arise in such energies, and which could assist them by begetting a creative function.

A NUMBER OF ENERGIES WITHIN THE SAME SPACE

Because he wanted to create the universe filled with different contents and wealth of functions, the Creator filled, so as to speak, each part of the universe with different energies. However, the creation of new energies in order to improve the contents and functioning, improved synchronization and removing of the danger from certain energies 'jumping out' of
