

**“Open Access is the only feasible way to continue the publication of specialized research books in chemistry.”**

Richard Holm

Chemistry

## Call for Submissions

Versita ([www.versita.com](http://www.versita.com)), a scholarly publisher, part of De Gruyter Publishing group is currently seeking submissions for its pioneering Open Access Books program in **Chemistry**.

This is an invitation to all emerging authors in the field of **DNA intercalating agents for cancer therapeutics**, as well as other related areas of research, to present their book proposals for an edited volume devoted to the subject.

The dedicated volume will assemble information on advances in DNA intercalation in cancer therapeutics. Cancer is one of the most prevalent diseases diagnosed in developed countries and one of the leading causes of mortality. DNA intercalators serve as an important cancer therapeutics agent. Since Lerman's discovery of the DNA intercalation process in 1961, thousands of organic and inorganic compounds have been developed as potential anticancer agents and diagnostic tools. Advances in spectroscopic techniques, nanoscience and organic chemistry mean that the process of DNA intercalation can be examined in far greater detail than ever before. Therefore, it is extremely important to compose new or updated information on the subject of DNA intercalating agents for cancer therapeutics in the form of an edited volume.

The volume will be published in the Open Access model, allowing readers worldwide to discover it and enhancing the visibility of the research.

Here are a few reasons why you should consider Versita as your publisher:

- fair and comprehensive peer-review of submitted proposals and manuscripts
- English language copy-editing by native English speaking specialists in the field
- printed copies sold to libraries and individuals, by Versita and distributors (e.g. Amazon)
- complimentary printed copies for book author and editors
- royalties for the author from print copy sales
- e-book delivery to libraries and full-text repositories (e.g. Google Book Search)

If you are interested, please send an abstract (less than 200 words) of your proposed paper and a brief biography to Shiva Rastogi – Associate Editor, Chemistry: [srastogi@versita.com](mailto:srastogi@versita.com).
