Remote ECG Over-reads and Echocardiogram Reads
CompuMed is a leading provider of Cardiac interpretive services to over 1,000 locations throughout the U.S. We perform nearly 100,000 tests annually.

Remote ECG Over-reads

- Access CompuMed's expert cardiologists
- Limit risk when specialists are not available
- Provide night time and after-hours cardiology support 24 hours a day, 7 days a week

Remote Echocardiogram Reads

- Enable 2D and 3D Doppler echocardiograms
- Supports Transesophageal echocardiograms (TEE)
- Manage cardiology capacity
- Allow STAT reads in as little as 1 hour
- Provide nighttime and after-hours cardiology support 24 hours a day, 7 days a week

Our service provides critical support to rural hospitals and after-hours or over-capacity support to general hospitals.

Digital workflow allows our nationwide network of cardiologists to receive ECGs and Echos from any client hospital. Reads may be returned directly to the hospital’s existing patient information system, in full compliance with HIPAA and other applicable standards.

We provide services for prevailing CPT rates allowing hospitals to pursue full reimbursements.
Echocardiograms, ECGs and other diagnostic cardiac imaging, monitoring and tests are complex and increasingly require specialized training to interpret.

Do not risk liability when your specialists are not available.

We can back you up anytime and anywhere!
Our Web-based Technology Supports Quality Care with Open Architecture

CompuMed’s workflow, imaging and data system is web-based so your team can access all information quickly from any web browser. Our solutions are independent of your equipment, devices, hardware or software and are standards-based, compatible with EMR and PACS environments.

We provide secure medical image management through our web-based PACS system. The technology will compress your image and transmit it using industry-standard SSL encryption. That is true for DICOM uploads as well. We can also provide secure hosting and data back-up.

We are compatible with most EMR and Hospital Management Systems and we can deposit data directly into your patient management system. Or you can use our web based systems if you do not have a patient management system.
We provide our services to surgery centers, occupational health clinics, research facilities, rural health, school-based health clinics, correctional facilities and other medical facilities.
